## OUR COMMITMENT TO THE ENVIRONMENT

Sodeca has begun a new stage of study and design of new trends in ventilation which will help to preserve the environment and to make the energy saving which so much concerns today's society.

### EFFICIENT WORK

SODECA is pleased to present its new efficient, high performance "Efficient Work" fans, equipped with high-tech motors for greater energy savings. These new products exceed the requirements of the Ecodesign ErP Directive of 2009/125/CE and the (EU) regulation 327/2011 governing fans and adhere to the KYOTO goals adopted by the EU for cutting greenhouse gas emissions.

**SODECA** focuses its business activity on the manufacture of industrial fans, ventilation systems and smoke extractor fans for fire protection since it was set up in 1983.

The fans and extractor fans manufactured by **SODECA** are present in Europe and in many other parts of the world due to their quality and the research and development methods used.

Our quality procedures, certified by BUREAU VERITAS in accordance with ISO 9001:2015, are another reason why **SODECA** is positioned as one of the best and most recognised fan manufacturer in Europe.

There is no doubt that the most important element in achieving our objectives is the human factor and the professionals who work in the company and offer not only ventilation equipment but solutions to all the needs of our customers in the ventilation sector.

We offer them the option of visiting our facilities in Sant Quirze de Besora, with a developed surface area of more than 16,000 m<sup>2</sup>, to see our fan production plant, which complies with the highest quality requirements and with the ISO and AMCA standards.

This catalogue contains just a few of all the options we offer. Please contact us and we will place all our experience and staff at your disposal.

SODECA S.L.U. main facilities in E-08580 SANT QUIRZE DE BESORA

# INDUSTRIAL FANS AND EXTRACTOR UNITS

Since it was first established, Sodeca has specialised in the design and manufacture of fans and their accessories for industrial applications.

The combination of its experience gained over decades of working with fans and the technology provided by the engineers employed in its different departments has allowed Sodeca to occupy a leading international position as a fan manufacturer.

Industrial applications require an important capacity to adapt to the specifications of each project and flexibility in production in order to comply with the real needs of each client.

To comply with this objective, Sodeca has a standard products line and a specially-manufactured products line for building fans that meet the demands of our clients.

For many years, we have constantly invested in the development of processes and applications aimed at manufacturing and supplying special industrial fans with extremely tight deadlines in terms of their design and production.

The teamwork of our engineering department, in conjunction with universities and technological centres, and the close cooperation between the design departments of our external partners has made it possible to obtain new industrial fan solutions in a very short space of time.

During our history, we have developed all manner of fan technology for industrial applications in all parts of the world. Our aim is to continue to invest in this sector in order to become one of the most reputed global industrial fan manufacturers.

**IN-LINE DUCT EXTRACTOR FANS**

12

SVE	SVE/PLUS	NEOLINEO/V	NEOSILENT	EDMF

## NEW TOOL FOR ENGINEERING FIRMS AND TECHNICAL DEPARTMENTS

### PROJECT MODULE

#### **Prepare technical reports in minutes**

- . Select hundreds of models in a single step
- . Mass load your data in Excel.
- . Edit and process the technical data sheets.
- . Print out the report with a contents table and cover, edit it or send it to another QuickFan.

Easy  
search

Personalise  
reports

Always  
updated

Reports in  
minutes

### OVERPRESSURE CALCULATION IN STAIRCASE AREAS

- . Rapid calculation of the necessary staircase over pressure flow rate for the most common systems, in accordance with UNE-EN 12101:2006.
- . Easily configure the design for each floor or for evacuation route areas.

### 3D CAD MODELS

- . Download our fans in 3D Cad from our website.
- . Choose from among more than 40 available Cad formats, including Revit.
- . More than 2,000 models and configurations available.

# COMPLIANCE WITH STANDARDS

**SODECA fans and extractors comply with the following standards:**

QUALITY	
ISO 9001:2015	Sistemas de gestión de la calidad. Requisitos. Quality management systems -- Requirements
TRIALS	
UNE-EN ISO 5801	Ventiladores industriales. Ensayos de comportamiento en circuitos normalizados. Industrial fans -- Performance testing using standardized airways
AMCA 210-07	Ventiladores industriales. Métodos de ensayos de ventiladores y su representación de ensayos. Laboratory Methods of Testing Fans for Aerodynamic Performance Rating
UNE EN ISO 13350	Ventiladores industriales. Ensayos de comportamiento de ventiladores de chorro. Industrial fans -- Performance testing of jet fans
ISO 13348	Industrial fans -- Tolerances, methods of conversion and technical data presentation
HIGH TEMPERATURE FANS	
EN 12101-3	Sistemas de control de humos y calor. Parte 3: Especificaciones para aireadores extractores de humos y calor mecánicos. Smoke and heat control systems - Part 3: Specification for powered smoke and heat exhaust ventilators
ACOUSTICS	
EN ISO 3744	Acústica. Determinación de la acústica power levels of noise sources based on acoustic pressure. Método de ingeniería para condiciones de campo libre sobre un plano reflectante. Acoustics -- Determination of sound power levels of noise sources using sound pressure. Engineering method in an essentially free field over a reflecting plane
BALANCING AND VIBRATIONS	
ISO 1940-1	Vibraciones mecánicas. Calidad de equilibrado Mechanical vibration -- Balance quality requirements for rotors in a constant (rigid) state -- Part 1: Specification and verification of balance tolerances
ISO 10816-1	Vibraciones mecánicas. Evaluación de las vibraciones de máquinas Mechanical vibration -- Evaluation of machine vibration by measurements on non-rotating parts -- Part 1: General guidelines
ISO 14694	Ventiladores industriales. Especificaciones para equilibrado y niveles de vibración Industrial fans -- Specifications for balance quality and vibration levels
SAFETY (EC Declaration of Conformity)	
EN ISO 12100-1	Seguridad de las máquinas. Conceptos básicos, principios generales para el diseño. Parte 1: Terminología básica, metodología. Safety of machinery -- Basic concepts, general principles for design -- Part 1: Basic terminology, methodology
EN ISO 12100-2	Seguridad de las máquinas. Conceptos básicos, principios generales para el diseño. Parte 2: Principios técnicos. Safety of machinery -- Basic concepts, general principles for design -- Part 2: Technical principles
UNE EN 60204-1	Seguridad de las máquinas. Equipo eléctrico de las máquinas. Parte 1: Requisitos generales. Safety of machinery - Electrical equipment of machines - Part 1: General requirements
EN ISO 13857	Seguridad de máquinas. Distancias de seguridad para impedir que se alcancen zonas peligrosas con los miembros superiores e inferiores. Safety of machinery -- Safety distances to prevent danger zones being reached by upper and lower limbs
UNE EN ISO 12499	Ventiladores industriales. Seguridad mecánica en los ventiladores Industrial fans -- Mechanical safety of fans -- Guarding
DIRECTIVES AND REGULATIONS	
Directive 2006/42/CE	Directiva de máquinas Machinery Directive

# SVE

## SVE/PLUS

SVE

Folding inspection cover, except models 100-125-150/L-160/L

SVE/PLUS

**SVE:** Low-noise, in-line duct extractor fans mounted inside an acoustic casing

**SVE/PLUS:** In-line, low noise duct fans mounted inside a 40 mm Phonoabsorbent acoustic casing

Fan:

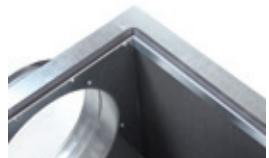

- Acoustic casing coated with phonoabsorbent material.
- Impeller with reaction blades except models 100-125-150-160-200/H, with multi-blade impeller.
- Standardised intake and impulsion flanges allowing for easy installation in ducts.
- Fitted with a folding inspection cover, except models 100-125-150/L-160/L.
- Support feet built into the box, for easy installation.
- Linear air flow direction.

Motor:

- External rotor motors with built-in thermal protector, class F, with ball bearings, IP54 protection.
- Adjustable, single-phase 220V 60Hz.
- Maximum temperature of air to be carried: +50 °C.

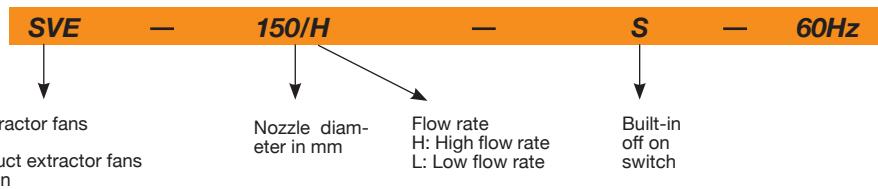

Finish:

- Anti-corrosive galvanised sheet steel.

40 mm acoustic insulation model SVE/PLUS

### Acoustic characteristics

The values given are determined by measuring the sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the impeller diameter, with a minimum of 1.5 m.

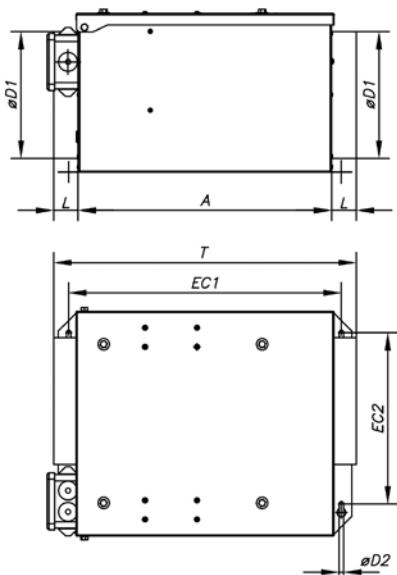

Sound power spectrum Lw(A) in dB(A) per Hz frequency band.

### Accessories

# NEOLINEO/V

**In-line duct extractor fans with a detachable body and small size and durable ball bearings**

Fan:

- Casing made of self-extinguishing V0 plastic material
- External terminal box with variable position
- Easy, rapid installation

Motor:

- 2-speed, adjustable motors with durable ball bearings and IPX4 protection
- Single-phase 110/120V. 60Hz or 220V 60Hz
- Operating temperature -10 °C + 60 °C

Finish:

- Made of V0 white, plastic, self-extinguishing material

# NEOSILENT

**Low-noise, in-line duct extractor fans  
fitted with durable ball bearings.**

Fan:

- Sheet steel casing.
- Thermal and acoustic insulation with rockwool.
- Internal perforated casing to facilitate noise absorption.
- External terminal box.
- Easy, rapid installation.

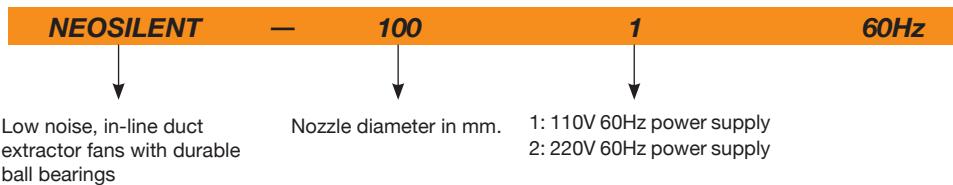

Motor:

- 2-speed motors with durable ball bearings and IPX4 protection.
- Single-phase 110-120V 60 Hz or 220/240V 60Hz.
- Operating temperature: -10 °C +60 °C.

Finish:

- Grey anticorrosive polymer coating.

# EDMF

**Extra-flat bathroom extractor fans with a modern appearance and design**

- Architectural integration with the bathroom elements.
- Ultra-silent.
- Extra-flat design with a thickness of just 17 mm.
- High performance thanks to its aerodynamic design.
- Can be easily and quickly installed.

Construction:

- White finish.
- Non-return hatch built into all models.
- Made with recyclable materials.

Motor:

- Single phase 110V 60Hz or 220V 60Hz as per order.

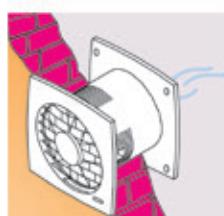

Version

- BASIC: operates with a light switch or a separate switch.
- TIMER: operates with an adjustable electronic timer.
- LL: Long life ball bearings.

## Wall-mounted axial fans with IP55 motors

Wall-mounted axial fans with reinforced plastic rotor made of fibreglass.

HC

HC  
71 80  
90.100**Fan:**

- Sheet steel support frame.
- Fibreglass reinforced polyamide-6 rotor.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Models 71, 80, 90 and 100, protective grille supplied as an accessory.
- Airflow direction from Motor to Impeller.

**Motor:**

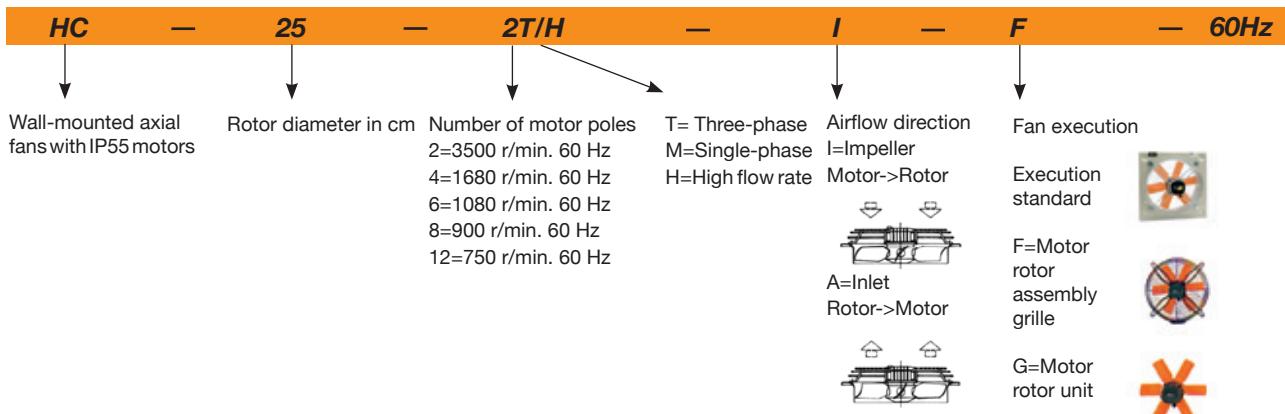

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings, IP55 protection, except single-phase models from size 45 to size 63, IP54 protection. With 1 or 2 speed, depending on model.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Operating temperature: -25°C +60 °C.

**Finish:**

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

**On request:**

- Motor, rotor and grille unit (version F).
- Rotor motor unit, version G.
- Airflow direction from Impeller to Motor.
- Special windings for different voltages.

### Acoustic characteristics

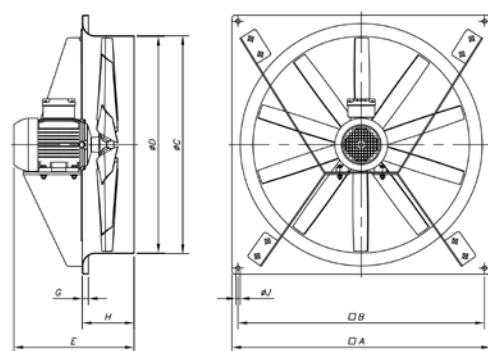

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the rotor diameter, with a minimum of 1.5 m.

Sound power spectrum Lw(A) in dB(A) per Hz frequency band

### Axial fans with large diameters

Wall-mounted axial fans designed for large airflows at low speed with automatic opening blind.

#### Fan:

- Sheet steel support frame.
- Galvanised sheet steel structure.
- Galvanised sheet steel rotor.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499:2010.
- Specially designed for use in farms and greenhouses.
- Airflow direction from Motor to Impeller.

#### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.

- Class F motors with ball bearings and IP55 protection.

- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.

- Operating temperature: -25 °C + 50 °C.

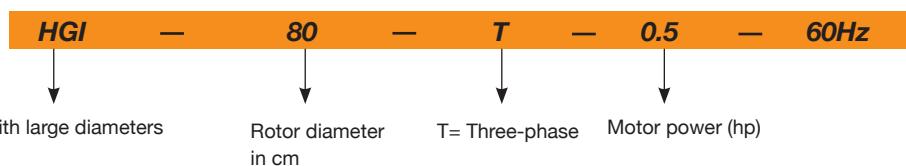

#### Finish:

- Anti-corrosive finished galvanised sheet steel.

#### On request:

- Without blind and with protective grille on the impulsion side.
- Special windings for different voltages.

## Wall-mounted axial fans with small diameters

Wall-mounted axial fans with an aluminium sheet rotor, split capacitor motors and built-in connection cable.

### Fan:

- Sheet steel support frame.
- Aluminium sheet rotor.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Airflow direction from Motor to Impeller.

### Motor:

- Class B motors with self-lubricating friction bearings, IP44 protection, except model 40 fitted with an F class motor with ball bearings and IP54 protection.
- Single-phase 110/120V. 60Hz or 220V 60Hz.
- Operating temperature: -25 °C+ 50 °C.

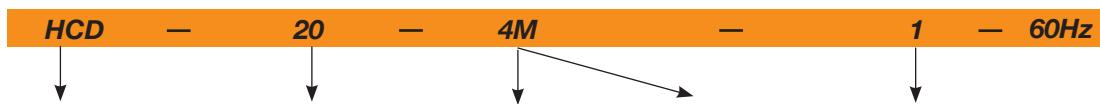

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Special windings for different voltages.

## **Extremely robust wall-mounted, axial or tubular fans**

Axial or tubular wall-mounted fans, PL version fitted with a plastic rotor and AL version with an aluminium rotor.

### Fan:

- Airflow direction from Motor to Impeller.
- PL version in fibreglass-reinforced polyamide-6 rots and AL version in cast aluminium.
- Models HCT-40-2T and HCT-45-2T only in AL version.
- HCH: Sheet steel support ring.
- HCT: Tubular casing in sheet steel with external terminal box.

HCH

HCT

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings, IP55 protection, except single-phase models from size 45 to size 56, IP54 protection. 1 or 2 speeds, depending on model.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Operating temperature: -25 °C.+ 50 °C.

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Airflow direction from Impeller to Motor.
- Rotors 100% reversible.
- Special windings for different voltages.
- ATEX-certified Category 2.

**Acoustic characteristics**

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the rotor diameter, with a minimum of 1.5 m.

Sound power spectrum Lw(A) in dB(A) per Hz frequency band

## Axial ventilation units with acoustically-isolated box

Ventilation units with interior acoustic insulation and dismountable inspection hatches.

### Fan:

- Galvanised sheet steel structure with thermal and acoustic insulation.
- Fibreglass-reinforced polyamide-6 rotors.
- Ventilation units prepared for vertical or horizontal operation.
- Motor-rotor airflow direction.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection, except single-phase, from size 45 to 56, with IP54 protection. 1 or 2 speeds, depending on model.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Operating temperature: -25°C +50°C

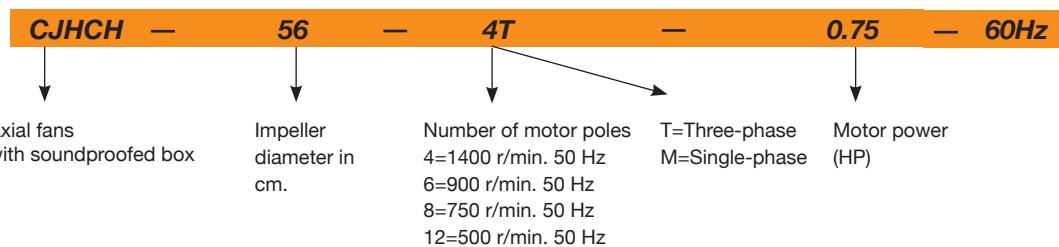

### Finish:

- Corrosion-proof galvanised sheet steel.

### On request:

- AL version cast aluminium impellers
- Airflow direction from impeller to motor.
- 100% reversible impellers.
- Special windings for different voltages

### Order code

### Acoustic features

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

Espectro de potencia sonora Lw(A) en dB(A) por banda de frecuencia en Hz

# HCT/IMP-C

*Long-range, circular, one-way or reversible jet fans*

Deflector for increasing range

Long range one-way or reversible jet fans with a circular design for air movement and CO extraction in car parks.

Fan:

- One-way or reversible fan unit formed by a fan, silencers, deflectors and supports.
- Adjustable rotors designed to produce great thrusts.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Deflector to increase the air range on the impulsion side. Reversible models are fitted with deflectors on both sides.
- High attenuation silencers with thermal and acoustic insulation.
- Air direction from Motor to Impeller or 100 % reversible.
- Circular casing in painted sheet steel.

Motor:

- Class F motors with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model.
- Three-phase 380-440V. 60 Hz.
- Maximum temperature of air to be carried: -20 °C +40 °C.

with phosphate-free nanotechnological treatment.

Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased

On request:

- Thrust features different from those indicated.
- Version approved for smoke evacuation in accordance with standard EN 12101-3 (see THT/IMP series).
- INT series safety switch built into the fan.

**Long-range one-way or reversible jet fans**

HCT/IMP-L

HCT/IMP-LS

Long range one-way or reversible jet fans with an octagonal design for air movement and CO extraction in car parks.

Fan:

- One-way or reversible fan unit formed by a fan, silencers, deflectors and supports.
- Adjustable rotors designed to produce great thrusts.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Deflector to increase the air range on the impulsion side. Reversible models are fitted with deflectors on both sides.
- High attenuation silencers with thermal and acoustic insulation.
- INT series safety switch built into the fan (HCT/IMP-L)
- Air direction from Motor to Rotor or 100 % reversible.
- HCT/IMP-L: Galvanised sheet steel casing.
- HCT/IMP-LS: Short length galvanised sheet steel casing.

Motor:

- Class F motors with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model.
- Three-phase 380-440V. 60 Hz.
- Maximum temperature of air to be carried: -20 °C +40 °C.

On request:

- Thrust features different from those indicated.
- Version approved for smoke evacuation in accordance with standard EN 12101-3 (see THT/IMP series).

Finish:

- Anticorrosive finish galvanised sheet steel.

**For use in garages****Accessories**

### **Hot dip galvanised tubular fans**

Tubular axial fans designed with four support arms to reduce vibrations and fitted with an aerodynamic aluminium low-consumption rotor.

#### Fan:

- Airflow direction from Motor to Impeller.
- AL version rotors made of cast aluminium.
- Support ring made of sheet steel with double flange and cable gland for motor power supply.
- Hot dip galvanised sheet steel tubular casing.

#### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Operating temperature: -25°C +50 °C.

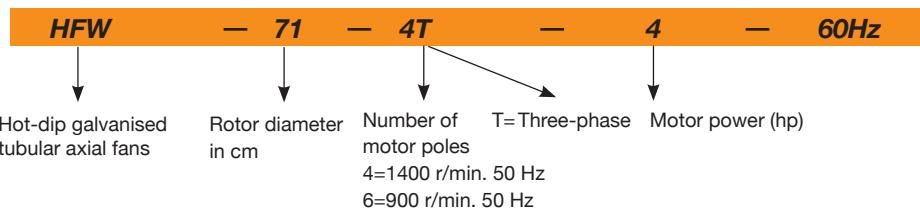

#### Finish:

- Hot dip galvanised.

#### On request:

- Airflow direction from Impeller to Motor.
- Fibreglass-reinforced polyamide PL version rotors.
- Rotors 100% reversible.
- Special windings for different voltages.
- ATEX-certified Category 2

#### **Order code**

### Acoustic characteristics

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the rotor diameter, with a minimum of 1.5 m.

Sound power spectrum Lw(A) in dB(A) per Hz frequency band

High pressure rotor

## High pressure tubular axial fans

High pressure, extremely robust tubular axial fans, specially designed for mining installations or in applications with large load losses.

Fan:

- Extremely thick sheet steel tubular casing.
- Motor support welded to casing.
- High aerodynamic performance directives for pressure gains.
- Optimal surface protection in high quality steel.
- High performance, cast aluminium rotor.
- Air direction from Impeller to Motor.
- Electrical connection in external terminal box.

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Operating temperature -20 °C +70 °C.

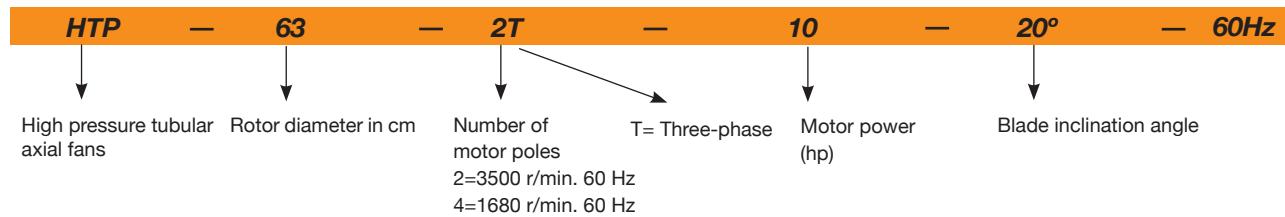

Finish:

- High protection anticorrosive steel, special primer and high quality paint for corrosive atmospheres.

On request:

- Standard IP55, ATEX and 2-speed motors.
- Made entirely of stainless steel.
- Made of hot dip galvanised steel.
- ATEX-certified Category 2.

## Acoustic characteristics

The indicated values are determined by measuring the sound pressure and power levels in dB(A), obtained in a free field at a distance equivalent to twice the size of the fan plus the diameter of the rotor, with a minimum of 1.5 m.

Model	Lp dB(A)	Sound power spectrum Lw(A) in dB(A) per Hz frequency band

## SELECTION EXAMPLE

### Characteristic curves

Q= Flow rate in  $\text{m}^3/\text{h}$ ,  $\text{m}^3/\text{s}$  and cfm.

P<sub>e</sub>= Static pressure in  $\text{mmH}_2\text{O}$ , Pa and inwg.

HTP-63-4T

### Starting data

- Working point:
- Flow rate: 12,500  $\text{m}^3/\text{h}$
- Load loss: 7.5  $\text{mm H}_2\text{O}$

### Equipment selection steps

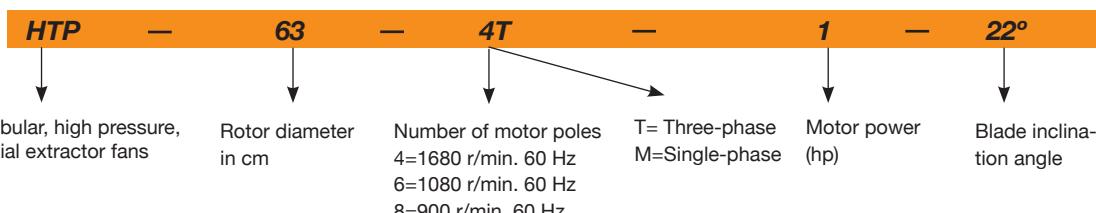

#### On the pressure graph:

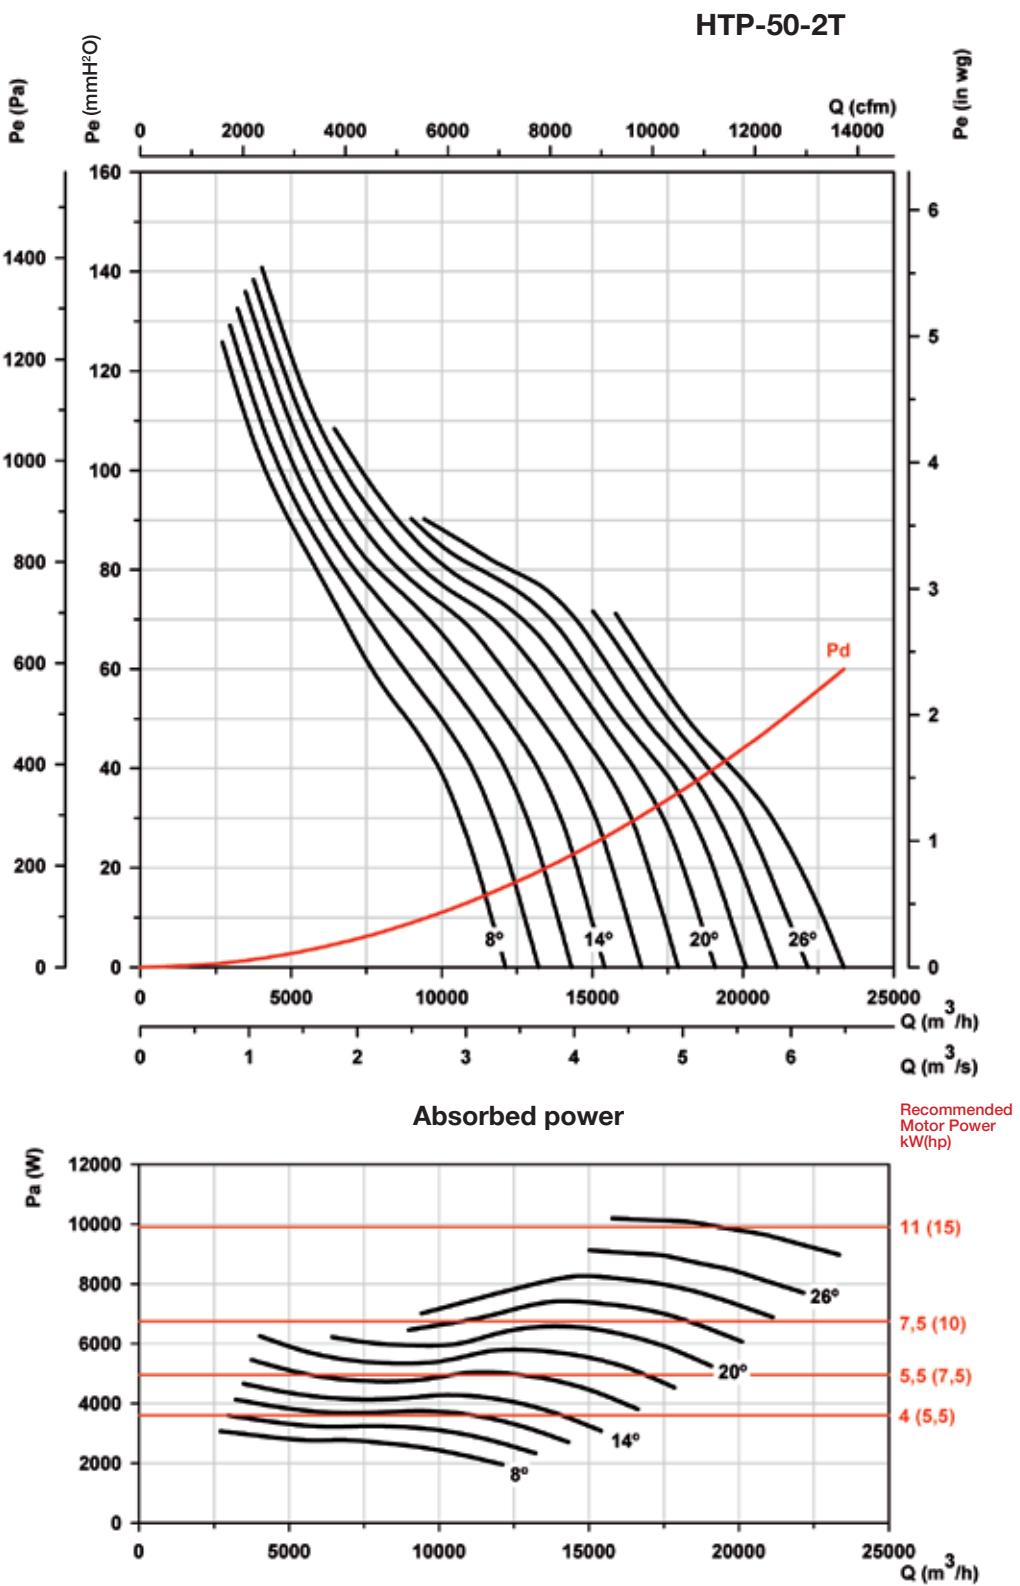

1. Mark the working point defined by the flow rate (12,500  $\text{m}^3/\text{h}$ ) and the load loss (7.5  $\text{mm H}_2\text{O}$ ).
2. Select the nearest equipment curve above the working point. In this case, a blade angle curve of 22° is obtained.

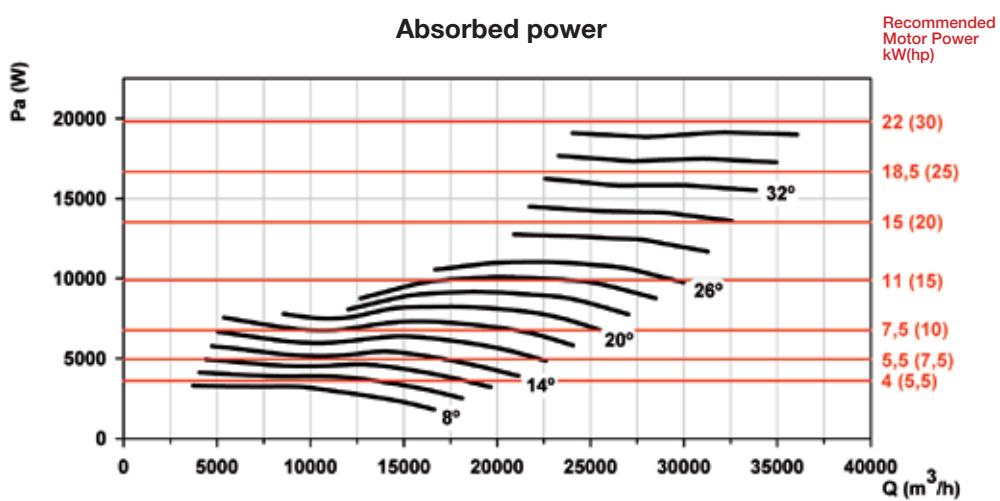

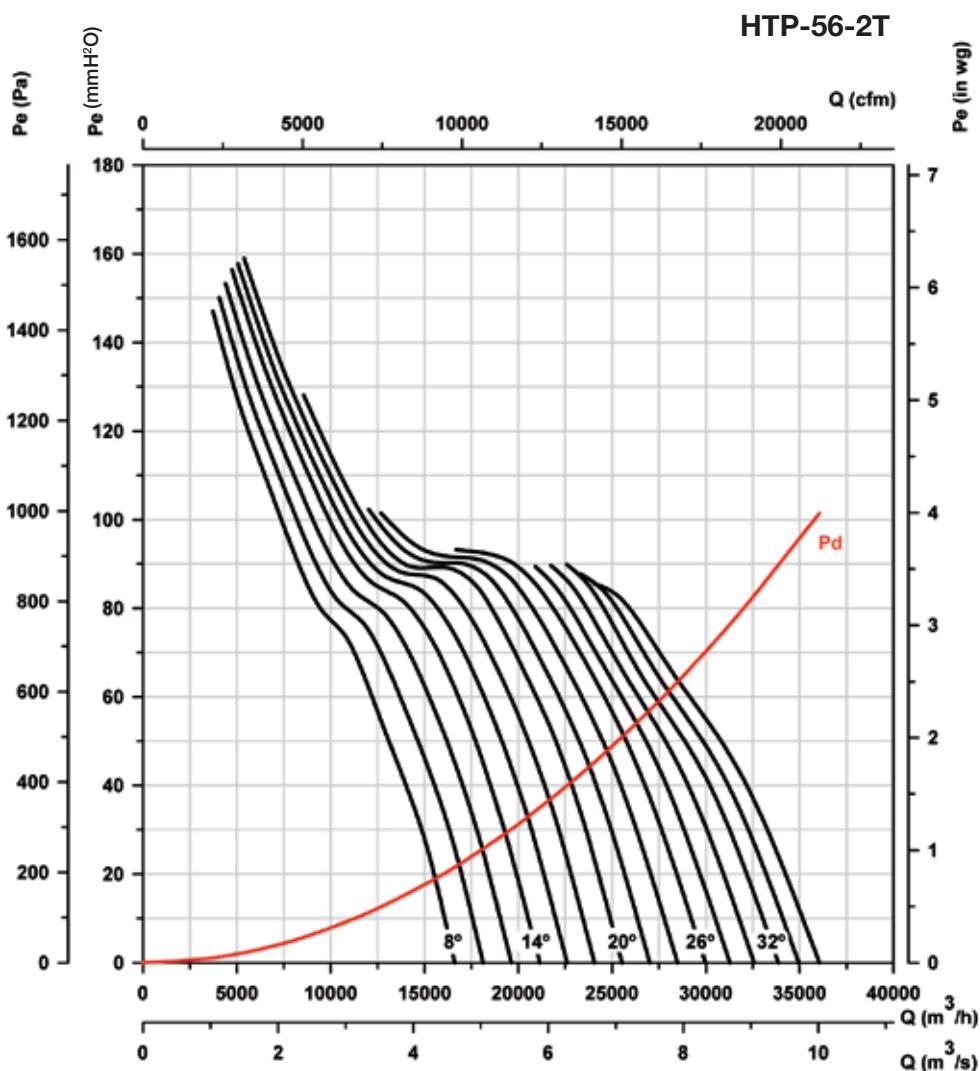

#### On the power graph:

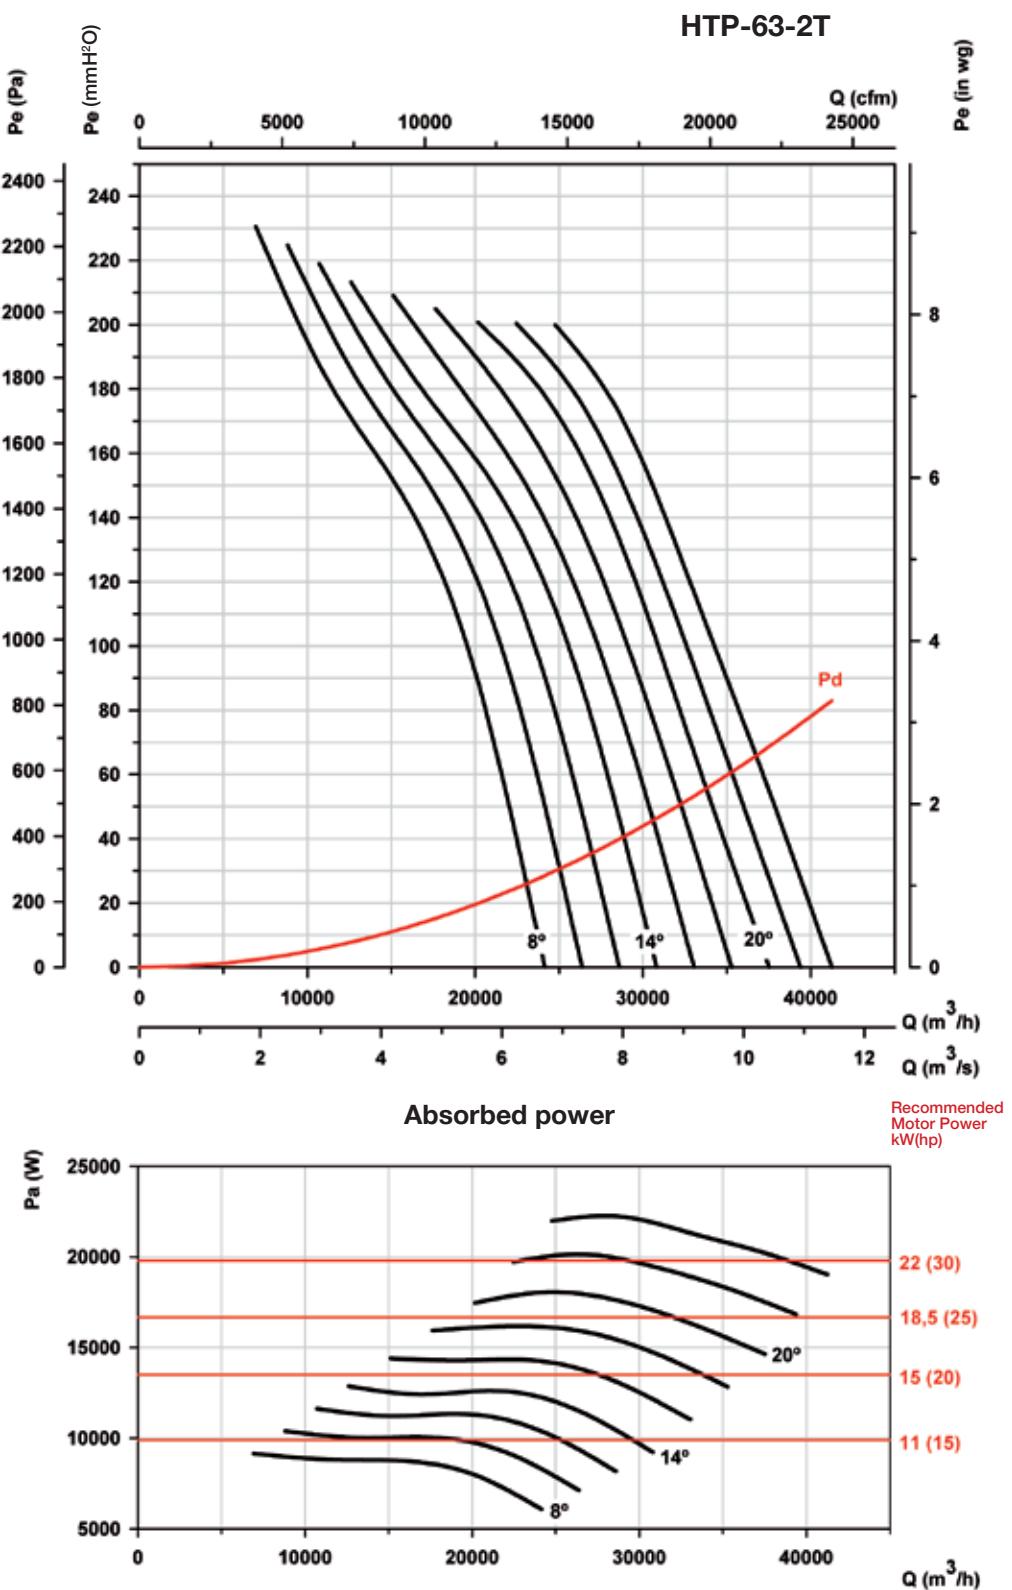

3. Mark the working point defined by the working flow rate (12,500  $\text{m}^3/\text{h}$ ) and the selected blade angle curve (22°).
4. Read the absorbed power on the left power axis. Pa= 560 W at the working point.
5. Find the nearest straight red line above the working point. The installed motor power is given on the right side of the graph. In this case, 0.75 kW or 1 hp

### Accessories

# HGT

# HGTX

**HGT:** Tubular axial fans with large diameters and direct drive motors.  
**HGTX:** Large diameter tubular axial fans with external motor.

Tubular axial fans fitted with aluminium rotors with 3, 6 or 9 blades and different angles of inclination.

Fan:

- Airflow direction from Motor to Impeller.
- Rotors made of cast aluminium with 3, 6 or 9 blades with adjustable angle of inclination.
- Sheet steel tubular casing.
- HGT: The standard version has a short casing. The long cased version is fitted with an inspection hatch.
- HGTX: Standard long cased version fitted with an inspection hatch.

HGT

HGTX

**Motor:**

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Operating temperature:  
-25 °C+ 50 °C (HGT),  
-25 °C+ 120 °C (HGTX)

**Finish:**

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

**On request:**

- Airflow direction from Impeller to Motor.
- Rotors 100% reversible.
- Special windings for different voltages.
- ATEX-certified Category 2.
- HGT: Long cased fans fitted with an inspection hatch.
- Two-speed motors.

## Order code

**HGT** — **125** — **4T** — **6-20** — **60Hz**

HGT: Tubular axial fans with large diameters and direct drive motors.

HGTX: Large diameter tubular axial fans with external motor.

Rotor diameter in cm

Number of motor poles

4=1680 r/min. 60 Hz  
6=1080 r/min. 60 Hz  
8=900 r/min. 60 Hz

T= Three-phase  
M= Single-phase

Number of blades

3 blades  
6 blades  
9 blades

Motor power (hp)

60Hz

### Acoustic characteristics

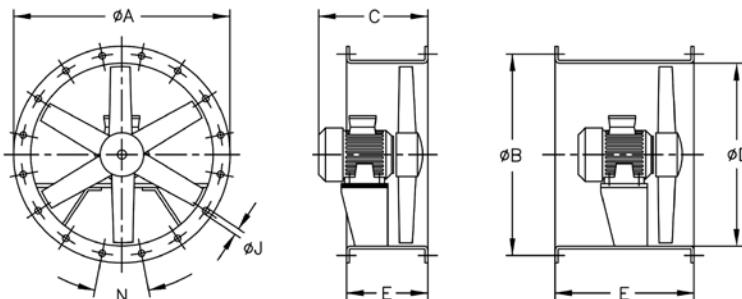

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the rotor diameter, with a minimum of 1.5 m.

Sound power spectrum Lw(A) in dB(A) per Hz frequency band

## SELECTION EXAMPLE

### Characteristic curves

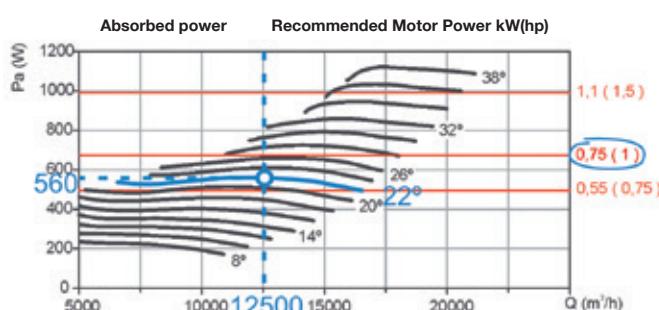

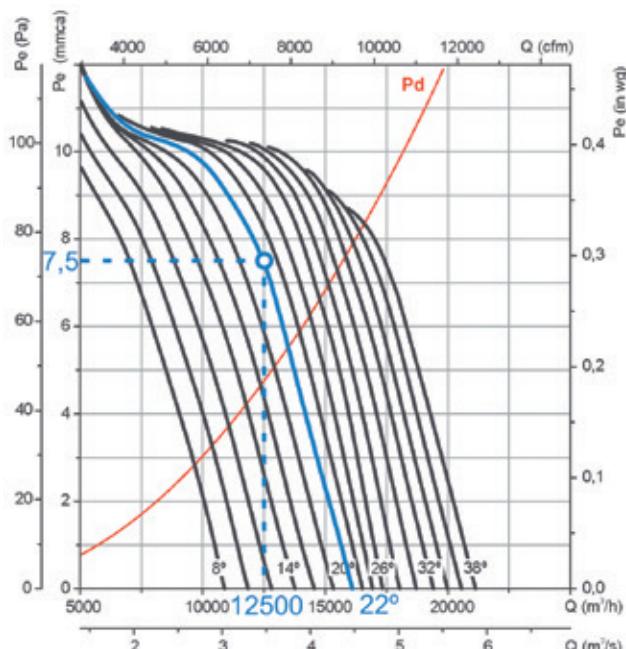

$Q$ = Flow rate in  $\text{m}^3/\text{h}$ ,  $\text{m}^3/\text{s}$  and cfm.

$P_e$ = Static pressure in  $\text{mmH}_2\text{O}$ , Pa and inwg.

Rotor diameter (cm): 125

Number of poles: 8

Number of blades: 3

### Starting data

- Working point:
- Flow rate: 12,500  $\text{m}^3/\text{h}$
- Load loss: 7.5 mm c.a.

### Equipment selection steps

On the pressure graph:

1. Mark the working point defined by the flow rate (12,500  $\text{m}^3/\text{h}$ ) and the load loss (7.5  $\text{mm H}_2\text{O}$ ).
2. Select the nearest equipment curve above the working point. In this case, a blade angle curve of 22° is obtained.

On the power graph:

3. Mark the working point defined by the working flow rate (12,500  $\text{m}^3/\text{h}$ ) and the selected blade angle curve (22°).
4. Read the absorbed power on the left power axis.  $Pa= 560 \text{ W}$  at the working point.
5. Find the nearest straight red line above the working point. The installed motor power is given on the right side of the graph. In this case, 0.75 kW or 1 hp.

## ORDER CODE EXAMPLE

HGT — 125 — 8T — 3 — 1 — 22

HGT: Tubular axial fans with large diameters and direct drive motors.

HGTX: Large diameter tubular axial fans with external motor.

Rotor diameter in cm

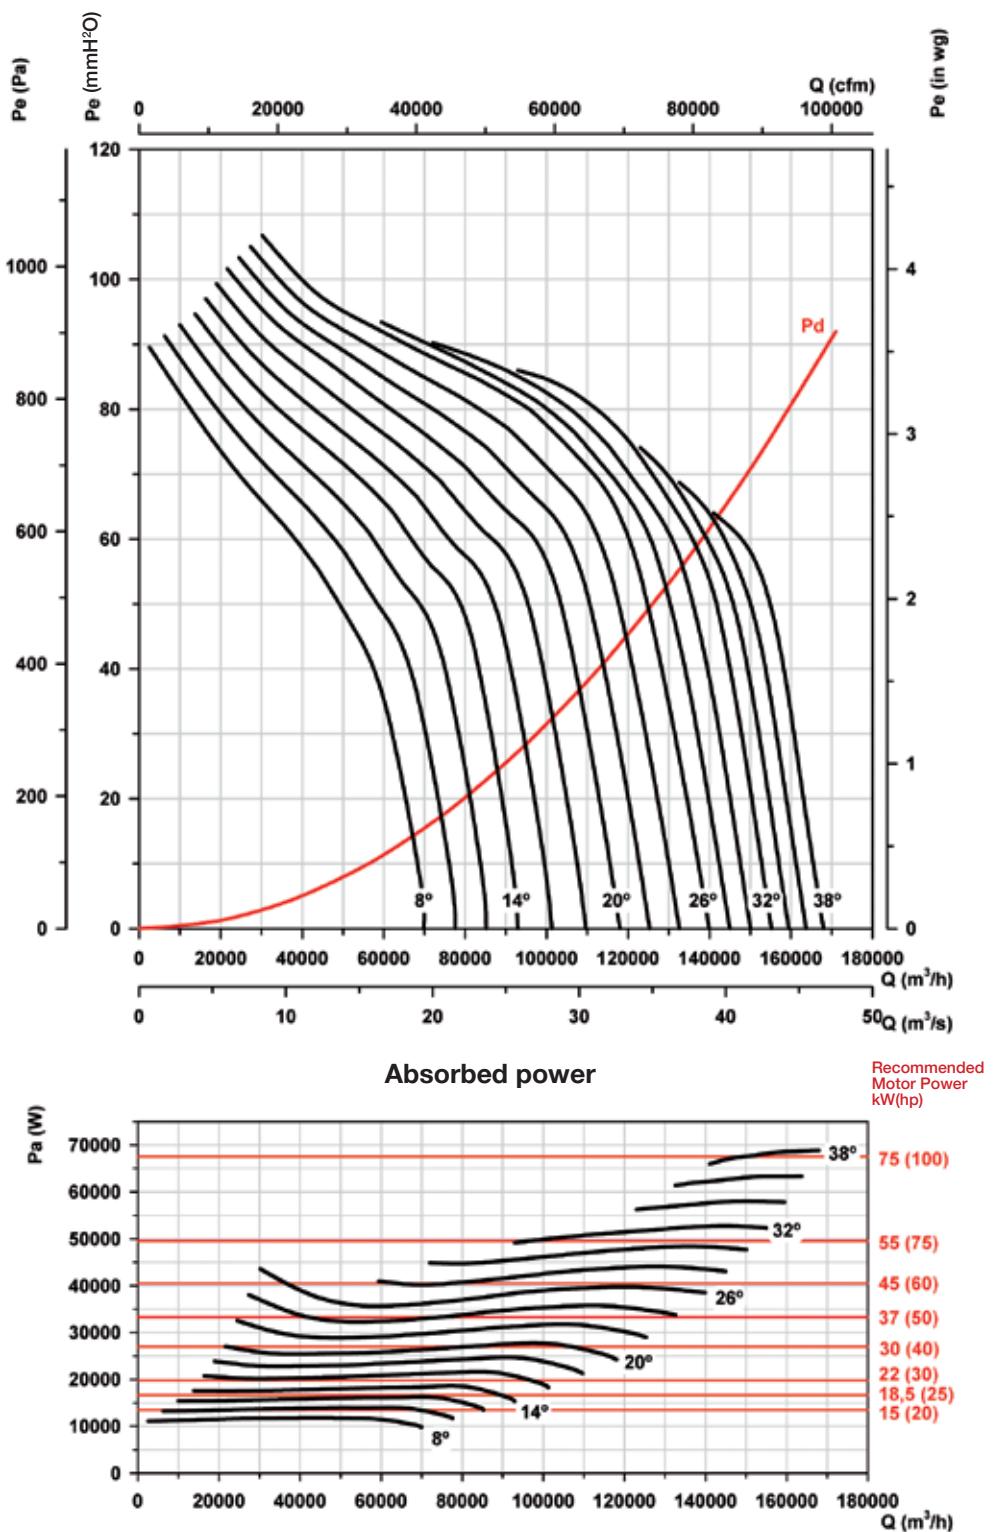

Number of motor poles  
4=1680 r/min. 60 Hz  
6=1080 r/min. 60 Hz  
8=900 r/min. 60 Hz

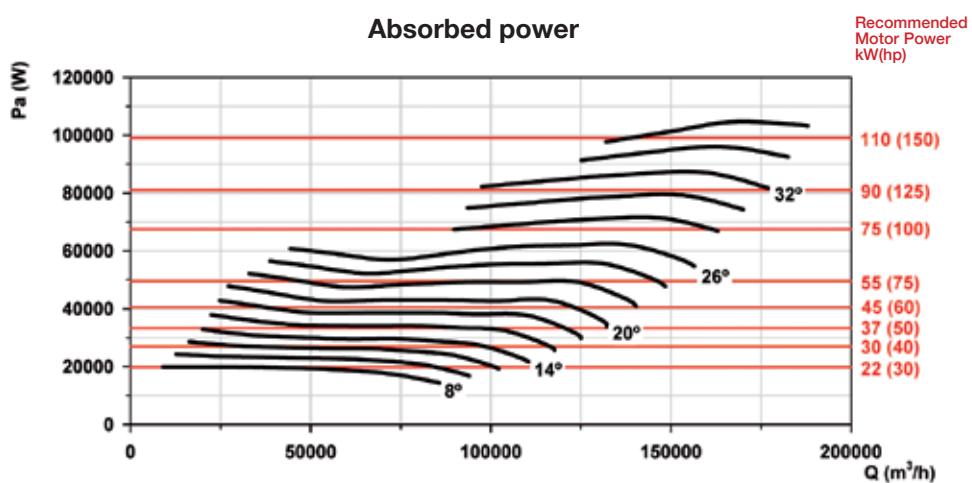

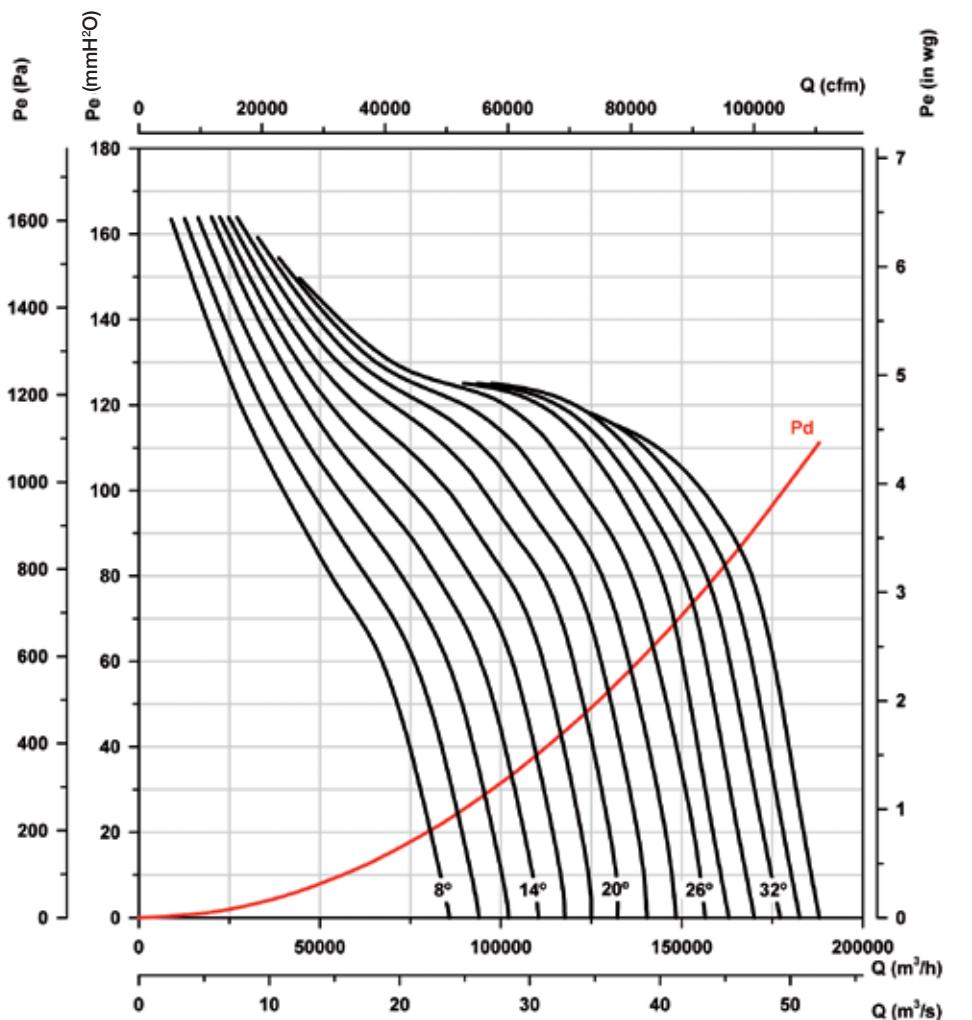

T= Three-phase  
M=Single-phase

## Tubular axial fans with external motors

Tubular axial fans activated by transmission with casing aperture up to 180°.

### Fan:

- Tubular casing with rotating cap, in sheet steel.
- Cast aluminium rotors.
- Sealed transmission unit (IP66) with double retention system.
- Airflow direction from Motor to Impeller.
- Maximum temperature of air to be carried: -25 °C +120 °C.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.

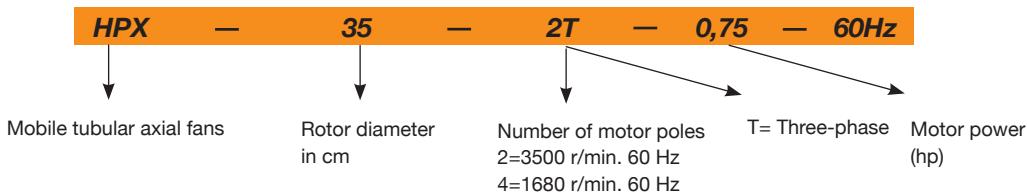

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Airflow direction from Impeller to Motor.
- Rotors 100 % reversible.
- Special windings for different voltages.
- Category 2 ATEX certification (HPX/ATEX series version).

## Acoustic characteristics

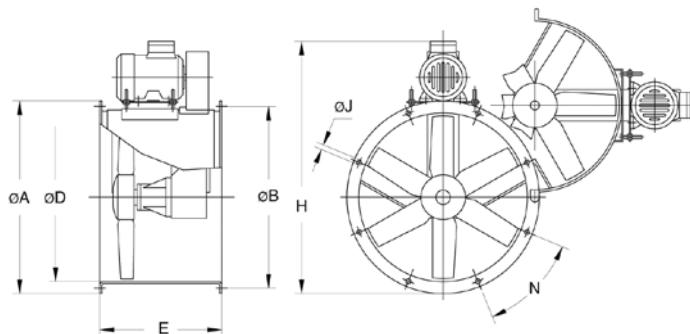

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the rotor diameter, with a minimum of 1.5 m.

Sound power spectrum Lw(A) in dB(A) frequency band in [Hz]

## Forked tubular axial fans with motor outside the air flow

Forked tubular fans for transferring air up to 150 °C in continuous operation and up to 200 °C in sporadic mode.

### Fan:

- Sheet steel tubular casing.
- Cast aluminium rotor.
- Airflow direction from Impeller to Motor.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Operating temperature: -25 °C. + 150 °C.

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Stainless steel casing.
- Hot dip galvanised finish.
- Special windings for different voltages and motors with PTC thermistors.

## CENTRIFUGAL FANS

Since it was first established, Sodeca has specialised in the design and manufacture of fans and their accessories for industrial applications.

The combination of its experience gained over decades of working with fans and the technology provided by the engineers employed in its different departments has allowed Sodeca to occupy a leading international position as a fan manufacturer.

Industrial applications require an important capacity to adapt to the specifications of each project and flexibility in production in order to comply with the real needs of each client.

To comply with this objective, Sodeca has a standard products line and a specially-manufactured products line for building fans that meet the demands of our clients.

For many years, we have constantly invested in the development of processes and applications aimed at manufacturing and supplying special industrial fans with extremely tight deadlines in terms of their design and production.

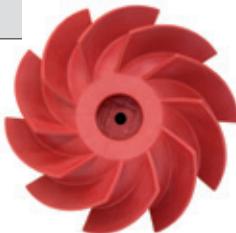

The teamwork of our engineering department, in conjunction with universities and technological centres, and the close cooperation between the design departments of our external partners has made it possible to obtain new industrial fan solutions in a very short space of time.

During our history, we have developed all manner of fan technology for industrial applications in all parts of the world. Our aim is to continue to invest in this sector in order to become one of the most reputed global industrial fan manufacturers.

# OUR IMPELLERS

**NEOLINEO impeller**

Axial-centrifugal impeller with a linear air direction design for operation at high pressures.

**CMX impeller**

Medium pressure, single inlet impeller with reaction blades.

**CMR impeller**

Extremely robust, high-performance, single inlet impeller with reaction blades for high flow rates and pressures.

**CBD impeller**

Double inlet, low pressure, multiblade impeller with reaction blades.

**CMRH impeller**

Extremely robust, high-performance single inlet impeller with reaction blades designed for working with high temperatures.

**CDXR impeller**

Double inlet impeller with reaction blades for high flow rates.

**CA-CAM impeller**

Impellers designed to obtain high pressures.

**CMP impeller**

Single inlet, medium pressure, multiblade impeller with reaction blades.

**CMT impeller**

Extremely robust impellers, designed to carry dust and solids.

# CI-CO

**Long-range, low profile, centrifugal induction jet fans**

Support feet

Long range, inductive, low profile, one-way or reversible jet fans, for air movement and CO extraction in car parks.

Fan:

- Sheet steel casing.
- Impeller with reaction blades in extremely robust sheet steel.
- INT series safety switch built into the fan.
- Support feet included.

Motor:

- Class F motors with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model.
- Three-phase 220-254V. 60Hz. and 380-440V. 60Hz.
- Maximum temperature of air to be carried: -20 °C +40 °C.

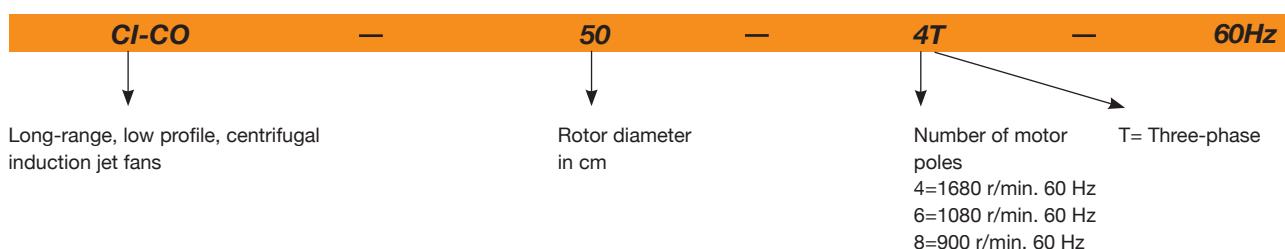

Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Version approved for smoke evacuation in accordance with standard EN 12101-3 (see CI series).

## **VENT-SET centrifugal extractor fans, belt-driven and fitted with a reaction impeller**

Belt-driven VENT-SET centrifugal extractors with reaction impeller fitted with electric motors and a standardised set of pulleys, belts and protectors in accordance with standards EN-294 and ISO-13852.

### Fan:

- Sheet steel casing.
- Impeller with reaction blades made of sheet steel.
- Standardised set of pulleys, belts and protectors in accordance with standard EN-294 and ISO-13852.
- Fitted with an inspection hatch.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C + 150 °C.

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Special windings for different voltages.

### Order code

CMX: Centrifugal, belt-driven extractor fans fitted with a reaction impeller

Impeller size

# CBD

*High quality, extremely robust impeller, dynamically balanced in accordance with ISO 21940-11*

**Double inlet centrifugal fans with direct drive motors and forward-curved impeller**

Fan:

- Galvanised sheet steel casing.
- Forward-curved impeller made of galvanised sheet steel.
- Supplied with PSB support feet.

Motor:

- High efficiency (HE) motors in compliance with ErP 2015.
- Closed motors with built-in thermal protector, class F, with ball bearings, IP54 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C + 60 °C.

Finish:

- Anti-corrosive finished galvanised sheet steel.

**Ventilation units made of aluminium profiles and galvanised sheet steel with acoustic insulation**

Fan:

- Double inlet CBD series fans.
- Aluminium profile and galvanised sheet steel structure with thermal and acoustic insulation.
- Forward-curved impeller, made of galvanised sheet steel.
- Cable gland for cable entry.

Motor:

- Closed motors with built-in thermal protector, class F, with ball bearings, IP54 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C + 60 °C.

Finish:

- Anti-corrosive finished sheet steel and aluminium profiles.

On request:

- With circular impulsion.

# CBXT

**CBX:** Belt-driven double inlet centrifugal fans with shaft outlet on both sides and forward-curved impeller

**CBXC:** Belt-driven double inlet centrifugal fans with an extremely rigid cube-like structure to reinforce the casing

**CBXR:** Belt-driven double inlet centrifugal fans with a reinforced structure and rigid-bridge bearings resting on the structure

**CBXT:** Belt-driven double inlet centrifugal fans fitted with electric motors, a set of pulleys and belts, protectors and forward-curved impeller

Fan:

- Galvanised sheet steel casing.
- Forward-curved impeller made of galvanised sheet steel.
- CBX and CBXC: Bearings resting on rubber shock-absorbers to prevent vibrations.
- CBX: Supplied with PSB support feet.

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Free shaft with permanently-greased ball bearings on both sides.
- Maximum temperature of air to be carried:  
CBX, CBXC and CBXT: -20 °C +80 °C  
CBXR: -20 °C +110 °C.

Finish:

- Anti-corrosive finished galvanised sheet steel.

On request:

- CBX: The motor support and SM belt tensioner can be supplied.

# CJBX/ALG

**Belt-driven ventilation units made of aluminium profiles and galvanised sheet steel with acoustic insulation**

**Fan:**

- Ventilation units fitted with double inlet fans from the CBX, CBXC and CBXR series.
- Aluminium profile and galvanised sheet steel structure with thermal and acoustic insulation.
- Forward-curved impeller made of galvanised sheet steel.
- Cable gland for cable entry.

**Motor:**

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C + 60 °C

**Finish:**

- Anti-corrosive finished sheet steel and aluminium profiles.

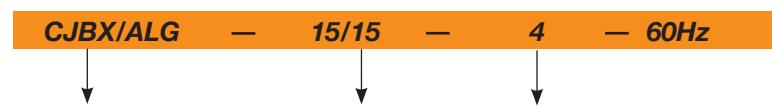

**On request:**

- With circular impulsion.

*High quality, extremely robust impeller, dynamically balanced in accordance with ISO 21940-11.*

## Order code

**CJBX/ALG:** With aluminium profiles and a galvanised sheet steel casing

**CJBX/F:** Ventilation units with a built-in filter

**CJBX/ALS:** Ventilation units with double insulated wall and pre-varnished sheet steel

**CJBX/ALF:** Ventilation units with a pre-varnished sheet steel and built-in filter

Impeller size  
in inches

Motor power (hp)

# CDXR CDXRT CJDXR

**CDXR:** Belt-driven double inlet centrifugal fans with shaft outlet on both sides and backward-curved impeller

**CDXRT:** Belt-driven double inlet centrifugal fans fitted with electric motors, a set of pulleys and belts, protectors and backward-curved impeller

**CJDXR:** Ventilation units with backward-curved impeller, acoustic insulation, fitted with fans from the CDRX series, resting on rubber shock-absorbers

Fan:

- Galvanised sheet steel casing.
- Backward-curved impeller blades made of galvanised sheet steel.
- Galvanised sheet steel structure with thermal and acoustic insulation (CJDXR).
- Cable gland for cable entry (CJDXR).

CDXR

CDXRT

CJDXR

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C. +60 °C.

Finish:

- Anti-corrosive finished galvanised sheet steel.

On request:

- Different impulsion nozzle positions.
- Special windings for different voltages.
- With 2-speed motors.

CJSXR

**Fan:**

- Galvanised sheet steel casing.
- Backward-curved impeller blades made of galvanised sheet steel.
- Galvanised sheet steel structure with thermal and acoustic insulation (CJSXR).
- Cable gland for cable entry (CJSXR).

**Motor:**

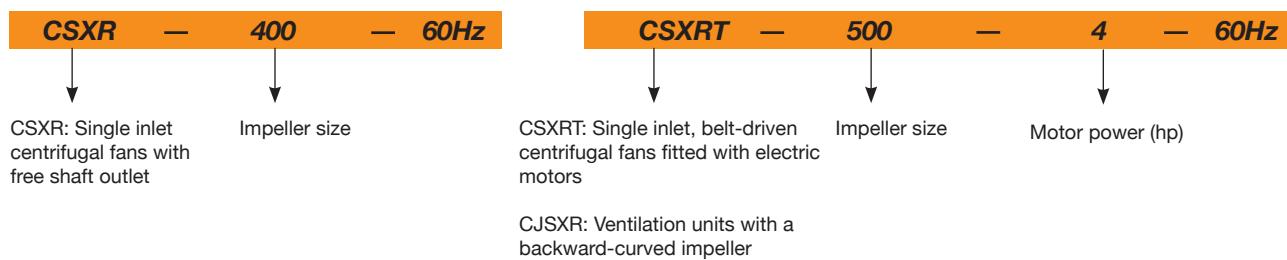

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C. +60 °C.

**Finish:**

- Anti-corrosive finished galvanised sheet steel.

**On request:**

- Different impulsion nozzle positions.
- Special windings for different voltages.
- With 2-speed motors.

**Order code****Technical characteristics**

### Characteristic curves

Q= Flow rate in  $\text{m}^3/\text{h}$ ,  $\text{m}^3/\text{s}$  and cfm.

Pe= Static pressure in  $\text{mm H}_2\text{O}$ , Pa and inwg.

### Accessories

# TSA

# TSAT

# CJTSA

**TSA:** Single inlet, belt-driven centrifugal fans with shaft outlet and forward-curved impeller

**TSAT:** Belt-driven, single inlet, centrifugal fans fitted with electric motors, a set of pulleys and belts, protectors and forward-curved impeller

**CJTSA:** Ventilation units with forward-curved impeller, acoustic insulation, fitted with fans from the TSA series, resting on rubber shock-absorbers

TSA

TSAT

CJTSA

Fan:

- Galvanised sheet steel casing.
- Impeller with forward-curved reaction blades made of galvanised sheet steel.
- Galvanised sheet steel structure with thermal and acoustic insulation (CJTSA).
- Cable gland for cable entry (CJTSA).

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C. +60 °C.

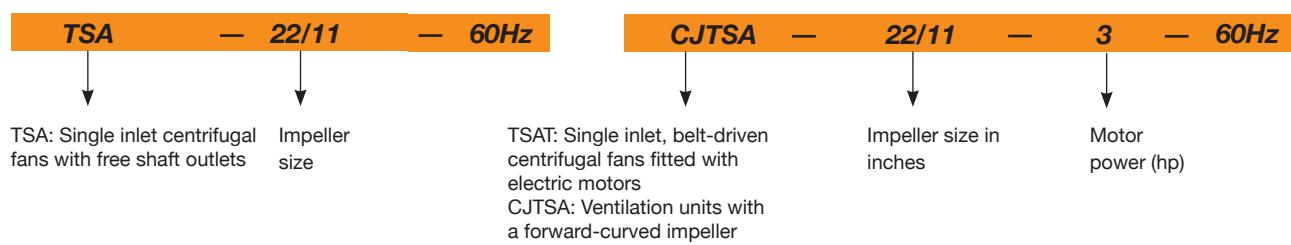

Finish:

- Anti-corrosive finished galvanised sheet steel.

On request:

- Different impulsion nozzle positions.
- Special windings for different voltages.
- With 2-speed motors.

# CJBR

**Soundproof ventilation units with sandwich-panel and linear airflow between the inlet and outlet.**

Fan:

- Galvanised sheet steel structure with thermal insulation and soundproofing.
- Impeller with backward-curved blades made from galvanised sheet steel
- Outlet mounting on any side of the box possible, during installation

Highly-efficient soundproofing

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings, IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Max. air temperature to transport: -20°C.+60°C.

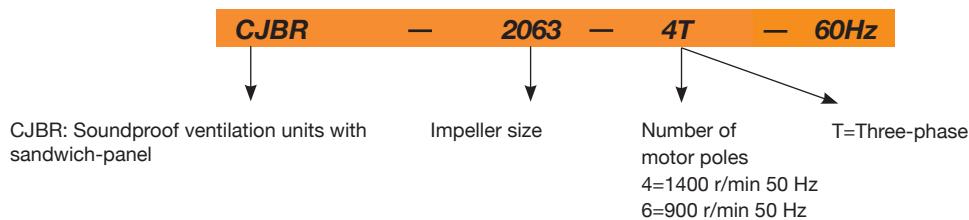

Finish:

- Anticorrosive galvanized sheet steel

On request:

- With circular outlet via the TAC accessory
- With 2 speed motors

## Acoustic features

The specified values are determined according to free field measurements of sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

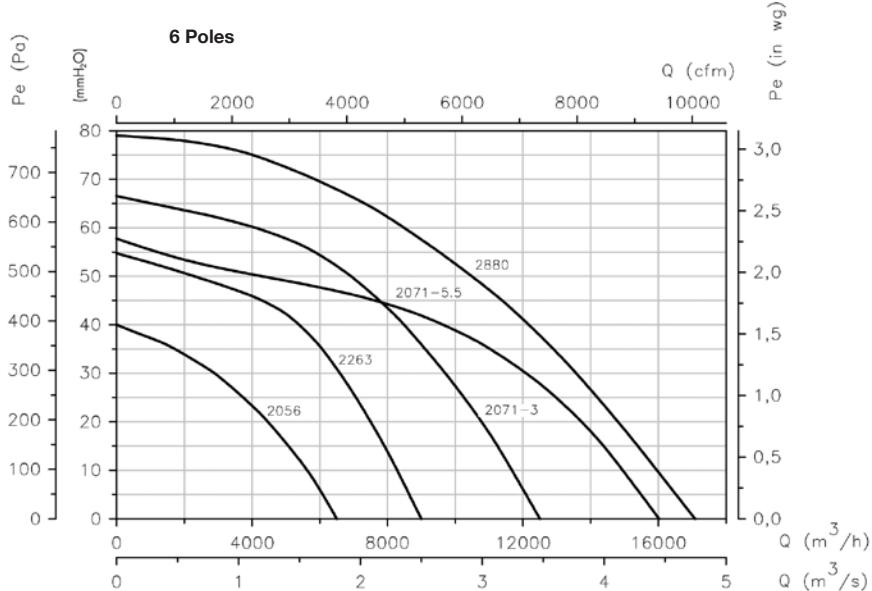

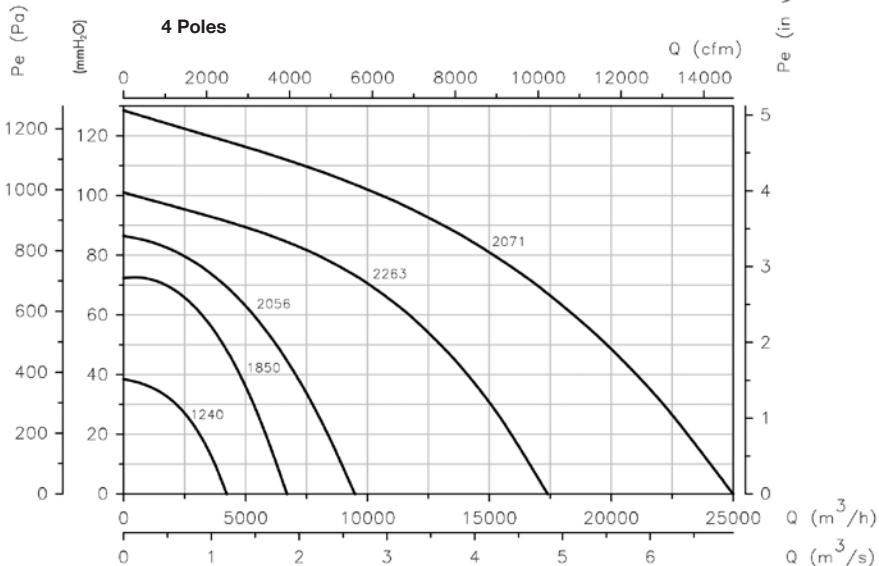

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

# CMP

**Medium pressure, single inlet centrifugal fans with sheet steel casing and impeller**

Fan:

- Sheet steel casing.
- Forward-curved impeller made of galvanised sheet steel.
- CMP 38-2M model casing in cast aluminium.
- Maximum temperature of air to be carried: -20 °C + 120 °C, maximum +100 °C model CMP-38.

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection except single-phase models, with IP54 protection CMP-38 model with IP21 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.

Finish:

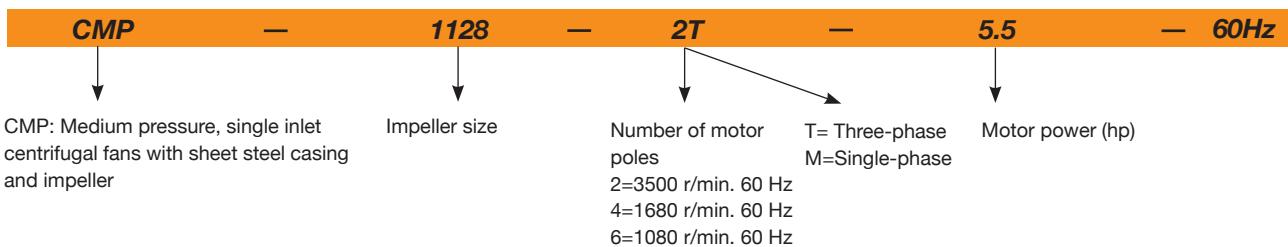

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Special windings for different voltages.
- Fan prepared for air transmission of up to 250 °C.
- Stainless steel fan.
- Category 2 ATEX certification (see CMP/ATEX series).

Dynamically-balanced impellers  
with extremely robust cores

### Characteristic curves

Q= Flow rate in  $\text{m}^3/\text{h}$ ,  $\text{m}^3/\text{s}$  and cfm.

Pe= Static pressure in  $\text{mm H}_2\text{O}$ , Pa and inwg.

### Orientation

Standard supply LG 270.

Positions LG 180 and RD 180 on request with special anchoring measurements.

### Accessories

# CMR

**Extremely robust medium pressure, single inlet centrifugal fans fitted with a backward-curved impeller.**

Extremely robust,  
high performance  
reaction impeller

Fan:

- Sheet steel casing.
- Impeller with reaction blades in extremely robust sheet steel.

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C.+ 120 °C.

Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Special windings for different voltages.
- Fan prepared for air transmission of up to 250 °C.
- Stainless steel fan.
- Category 2 ATEX certification (see CMR/ATEX series).

## Order code

**CMR — 1650 — 2T — 60Hz**

### Acoustic characteristics

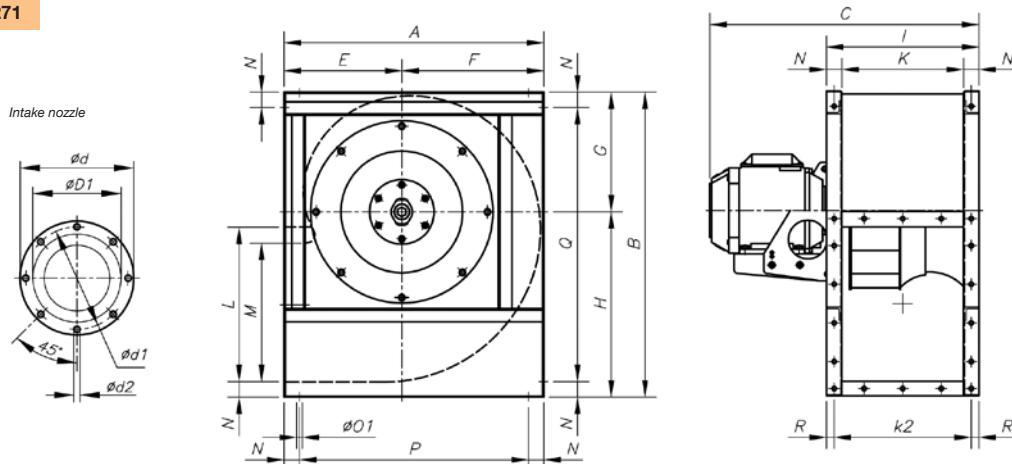

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the impeller diameter, with a minimum of 1.5 m.

Sound power spectrum Lw(A) in dB(A) per Hz frequency band.

**Characteristic curves**Q= Flow rate in  $\text{m}^3/\text{h}$ ,  $\text{m}^3/\text{s}$  and cfm.Pe= Static pressure in  $\text{mm H}_2\text{O}$ , Pa and inwg.

### Characteristic curves

Q= Flow rate in  $\text{m}^3/\text{h}$ ,  $\text{m}^3/\text{s}$  and cfm.

Pe= Static pressure in  $\text{mm H}_2\text{O}$ , Pa and inwg.

### Orientation

Standard supply LG 270.

Models 2380, 2590 and 28100 with LG 270 fixed orientation (other orientations only on request).

### Accessories

# CMA

*Different impulsion position options*

## Medium pressure, single inlet centrifugal fans with cast aluminium casing and impeller

### Fan:

- Cast aluminium casing.
- Cast aluminium impeller.
- Models 324, 325 and 426 impeller in polyamide, model 531-2T-3 impeller in sheet steel.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection except single-phase models, with IP54 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C + 120 °C, maximum +70 °C models with polyamide impeller.

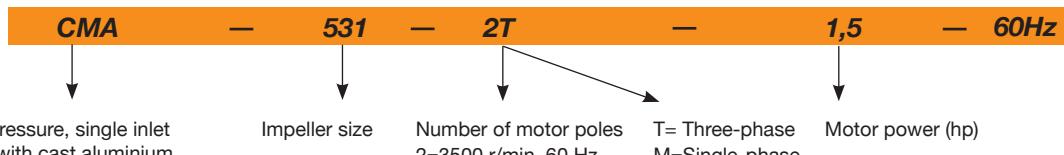

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Special windings for different voltages.
- Cast aluminium impellers for models 324, 325 and 426.
- Fan prepared for air transmission of up to 250 °C.
- Category 2 ATEX certification (see CMA/ATEX series).

**Anti-corrosive finished, single inlet centrifugal fans made of polypropylene**

Modern appearance and design

Fan:

- Polypropylene casing.
- Forward-curved impeller made of polypropylene.

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C +50 °C.

Finish:

- Anti-corrosive finished in plastic material.

On request:

- Special windings for different voltages.
- ATEX-certified Category 3.

**Accessories**

# CA

**High pressure, single inlet centrifugal fans with cast aluminium casing and impeller**

Fan:

- Cast aluminium casing.
- Cast aluminium impeller.

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C.+ 120 °C.

Finish:

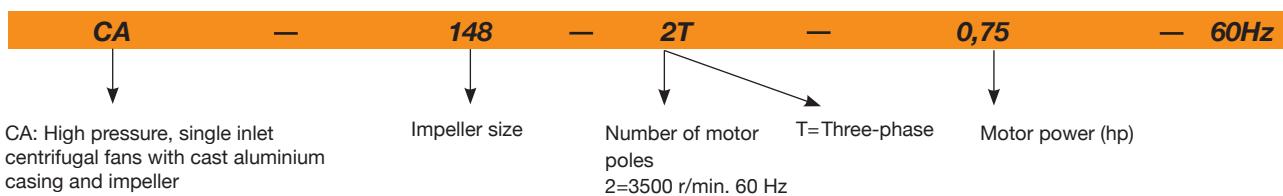

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Special windings for different voltages.
- Fan prepared for air transmission of up to 250 °C.
- ATEX-certified Category 2.

*Extremely thick aluminium construction  
to absorb noise and vibrations*

### Characteristic curves

Q= Flow rate in  $\text{m}^3/\text{h}$ ,  $\text{m}^3/\text{s}$  and cfm.

Pe= Static pressure in  $\text{mm H}_2\text{O}$ , Pa and inwg.

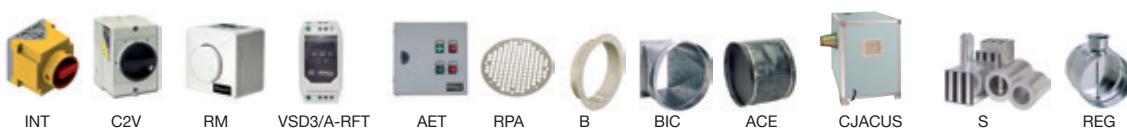

### Orientation

Standard supply LG 270.

LG 180 positions on request and with special anchoring measurements.

### Accessories

# CAS

## CAS-S

**CAS:** High pressure, single inlet centrifugal fans with sheet steel casing and impeller

**CAS-S:** High pressure, single inlet centrifugal fans with sheet steel casing and impeller, fitted with acoustic attenuators

Fan:

- Sheet steel casing.
- Backward-curved impeller made of galvanised sheet steel, except models 242-248-254-260-640-645-650 with cast aluminium impeller.
- CAS-S: Hexagonal profile acoustic attenuator built into the fan intake nozzle. Its design permits the adjustment of the air flow at the fan entrance.

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C.+ 120 °C.

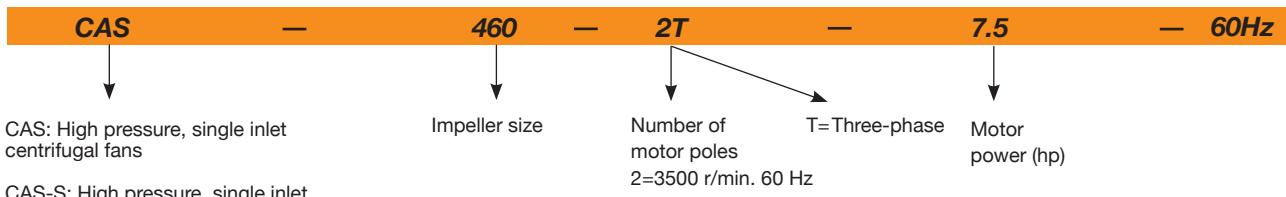

Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Special windings for different voltages.
- Fan prepared for air transmission of up to 250 °C.
- Stainless steel fan.
- ATEX-certified Category 2.

## EXTRACTION SYSTEMS WITH ROOF-MOUNTED FANS

Roof-mounted fans eliminate the harmful effects created when high temperatures and humidity make work and physical effort difficult. They also help extend the life of the structural elements of buildings and warehouses by preventing condensation and humidity. An adequate ventilation system in industrial buildings will considerably reduce cooling and heating expenditure. This type of system easily, continuously and effectively eliminates heat and humidity.

The Sodeca roof-mounted extractors and fans can be adapted to any type of roof. Their different models offer the perfect solution for each installation, thus optimising its operation.

**EFFICIENT WORK**

## ENERGY SAVINGS

The Sodeca EFFICIENT WORK fans, which have built-in next generation IE4 E.C. high-performance motors, are designed to reduce the daily energy consumption by around 45%. In addition, they can be controlled with intelligent ventilation systems that determine the ventilation needs appropriate at any given time, thus reducing energy consumption as much as possible.

## SAFETY IN THE EVENT OF FIRE

The fire protection standards make it obligatory to apply temperature control and smoke extraction systems in accordance with standard UNE / EN-23585, calculation and design requirements and methods for planning a temperature control and smoke extraction system in the event of fire. To provide a solution to the needs established by this standard, approved roof-mounted fans exist for this purpose, pursuant to standard EN-12101-3 with an F-400 (400 °C/2h) or F-300 (300 °C/2h) certificate.

## COMFORT AND NOISE REDUCTION

A working environment with the appropriate conditions of comfort is absolutely necessary to ensure an efficient job performance. The installation of outdoor fans brings greater comfort to work zones, reducing noise and the occupation of space in industrial buildings.

## REDUCTION IN HEAT AND MOISTURE

The hot air generated by indoor activity and heating of the roof due to solar radiation transform the roofs of industrial buildings into huge radiators that give off heat, which is transferred to work areas, increasing the temperature and the electricity bill due to a greater need for cooling. Furthermore, in colder climates, condensation increases the moisture level, saturating the insulation material of roofs and reducing their efficiency. A good ventilation system helps prevent all these effects which are harmful to the building structure and to people's health.

## MAINTENANCE AND CLEANING

It is very important for roof-mounted fans to be easy to clean, as they are very difficult to access. The maintenance of all the extraction system elements is essential and very important to achieve a high standard of cleaning and obtain the required grade of hygiene in each installation, thus preventing the possibility of handling contaminated air particles. Ease in the maintenance and installation of roof equipment leads to important cost savings, which is a factor to be considered.

# VC-HDU

## **Centrifugal roof-mounted extractor fans, with vertical air outlets made of aluminium**

Belt-driven centrifugal roof-mounted extractor fans with vertical air outlet made of aluminium, for extraction in industrial hoods and kitchens and harmful atmospheres.

### Fan:

- Galvanised sheet steel support base.
- Impeller with reaction blades, made of sheet steel.
- Cylindrical casing and cover plate made of aluminium.
- Top cover plate easy to open for inspection and maintenance.
- Transmission unit supported by shock absorbers to prevent noise and vibrations.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.

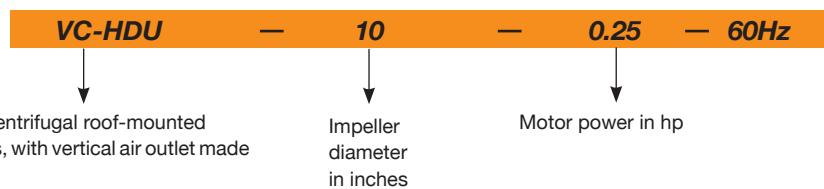

- Class F motors with ball bearings and IP55 protection.

- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C + 120 °C

### Finish:

- Anti-corrosive finished sheet aluminium with a satin finish and parts in galvanised steel.

### Order code

**60Hz**

## *Roof-mounted, belt-driven centrifugal fans with a vertical or horizontal air impulsion design*

Roof-mounted, centrifugal fans with a vertical or a horizontal air impulsion design, belt-driven double impulsion and washable filters.

Standard supply  
Vertical impulsion

### Fan:

- Galvanised sheet steel support base.
- Aluminium rain cap and deflectors.
- Aluminium profiles structure and lateral covers in pre-lacquered sheet steel.
- Activated by a belt and pulley transmission system.
- Vertical or horizontal air outlet, adjustable by the customer depending on installation needs.
- Cable gland for cable entry.
- Forward-curved impeller made of galvanised sheet steel.
- Metal air intake filters that are easy to wash.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75 kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- 220-254V / 380-440V, 60Hz. three-phase power supply.
- Maximum temperature of air to be carried: -20 °C. +60 °C.

### Finish:

- Anti-corrosive finished pre-lacquered galvanised sheet steel and aluminium.

### On request:

- With a horizontal impulsion.

Horizontal impulsion nozzle,

## 400 °C/2h centrifugal roof-mounted extractor fans with vertical or horizontal air outlet

RFH: 400 °C/2h centrifugal roof-mounted extractor fans, with horizontal air outlet and aluminium rain cap.

RFV: 400 °C/2h centrifugal roof-mounted extractor fans, with vertical air outlet and aluminium rain cap.

### Fan:

- Galvanised sheet steel support base.
- Impeller with reaction blades, made of galvanised sheet steel.
- Bird control grille.
- Aluminium rain cap.
- Approved in accordance with standard EN 12101-3:2002/AC:2006.

- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -25 °C +120 °C.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.

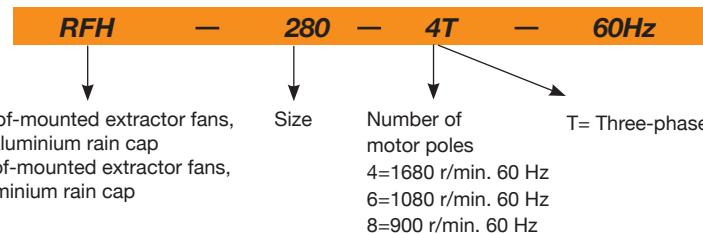

### Finish:

- Anti-corrosive finished galvanised sheet steel and aluminium.

### On request:

- Special windings for different voltages.
- ATEX-certified Category 3.

## **Roof-mounted centrifugal extractor fans, with low noise level**

Centrifugal roof-mounted extractor fans with low noise level and external rotor motor.

### Fan:

- Made of galvanised sheet steel.
- Impeller with reaction blades built of aluminium sheet metal except for models 225 and 250, which are made of galvanised sheet steel.
- Bird control grille.
- Folding body for ease of inspection and maintenance.

### Motor:

- Class F motors, external rotor and IP54 protection.
- Single-phase 230V-50/60Hz, except 450 and 500 230V 60Hz.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: -25°C + 50 °C.

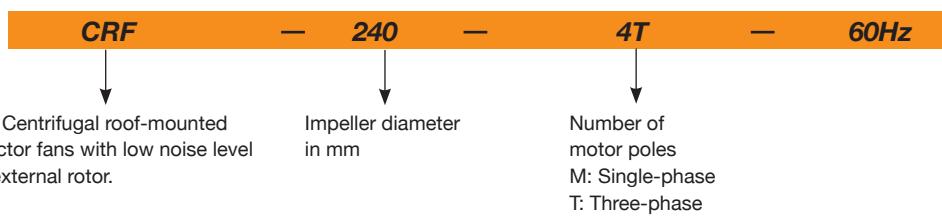

### Finish:

- Anti-corrosive finished galvanised sheet steel.

### On request:

- The variable speed drive (VSD) is supplied on request.

### Order code

## Roof-mounted axial extractor fans with flat bases

Roof-mounted axial extractor fans with fibreglass reinforced plastic rotor and flat base for installing on roof.

### Fan:

- Painted, galvanised sheet steel support base.
- Fibreglass reinforced polyamide-6 rotors, except for 100 models, which have 4 poles in aluminium.
- Bird control grille.
- Rain cap made of painted galvanised sheet steel, with protection against corrosion.
- Airflow direction from Motor to Impeller.

HT 25...63

HT 71...100

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings, IP55 protection, except single-phase models from size 45 to size 63, IP54 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: -25°C +60 °C.

•

### Finish:

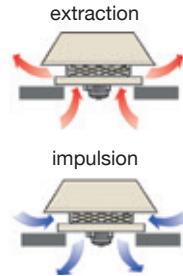

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Option of supply in the form of IMPULSION FANS.
- AL version rotors made of cast aluminium.
- Special windings for different voltages.
- ATEX-certified Category 2.

## **Roof-mounted multifunctional extractor fans for large flow rates**

Roof-mounted multifunctional extractor fans with robust structures for extraction operations with large flow rates.

### Fan:

- Painted, galvanised sheet steel support base.
- Cast aluminium orientable rotors.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Painted, galvanised sheet steel rain cap, with natural air outlet.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Operating temperature: -25 °C + 50 °C.

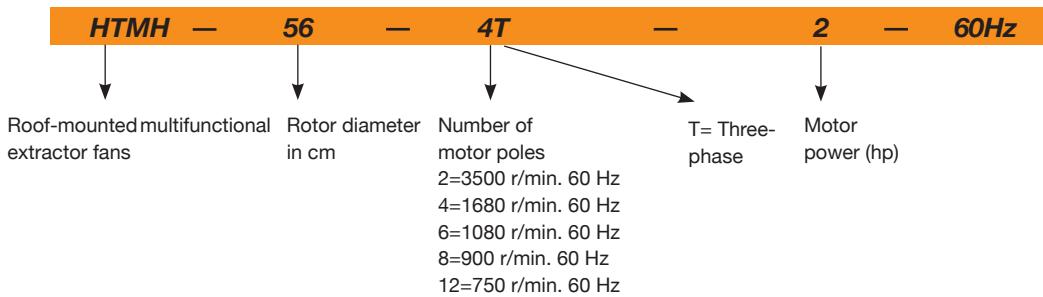

### On request:

- ATEX and 2-speed motors.
- Made entirely of stainless steel.
- Made of hot dip galvanised steel.
- Marine motors for naval applications, certified for essential service in accordance with different classification entities (BV, DNV, LR).
- CE, NEMA, UL, CSA motors.
- C5M quality surface finish.

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190°C, previously degreased with phosphate-free nanotechnological treatment.
- C4H quality surface finish

### Order code

### Technical characteristics

60Hz

## Roof-mounted axial extractor fans with vertical air outlet

Roof-mounted axial extractor fans with vertical air outlet, designed for extracting large air volumes in industrial or similar premises.

### Fan:

- Galvanised sheet steel support base with anti-corrosive treatment.
- Cast aluminium orientable rotors.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Anti-return hatch in aluminium sheet metal to prevent the entry of water when the fan is not operating.
- Airflow direction from Motor to Impeller.

### Motor:

- Class F motors with ball bearings and IP55 protection.
- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: -20 °C +40 °C.

### Finish:

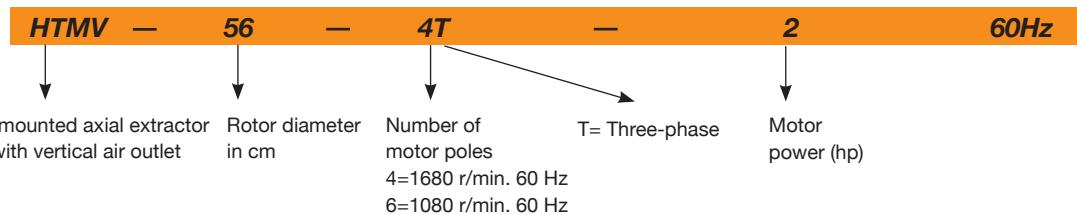

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

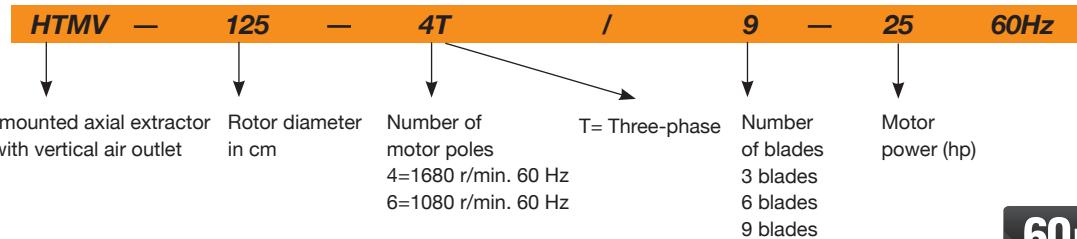

- Extractor fans with 2-speed motors.
- 2 and 8-pole fans depending on diameter.
- Special windings for different voltages and frequencies.
- Made entirely of stainless steel.
- Made of hot dip galvanised steel.

### Order code

From size 40 to size 100

Size 125

**60Hz**

(1) The noise level values are pressures in dB(A) measured at a distance of 6 metres in a free field.

**Accessories**

### Acoustic characteristics

The indicated values are determined by measuring the pressure and sound power levels in dB(A) obtained in a free field at a distance of 6 m.

Sound power spectrum Lw(A) in dB(A) frequency band in [Hz]

Values taken during intake with maximum flow rate

## EXTRACTOR FANS FOR SMOKE EVACUATION IN THE EVENT OF FIRE

Thanks to its knowledge gained during 25 years of experience in manufacturing fans for continuous operation at high temperatures, SODECA has become a specialist in the production of extractor fans for smoke evacuation in the event of fire and overpressure protection systems for smoke control in escape routes in the presence of fire.

Our production systems are certified by external control entities such as BUREAU VERITAS, and the quality controls performed on manufacturing processes and extractor control for smoke evacuation at high temperatures are also audited in full by independent organisations such as APPLUS, thus ensuring their correct operation and that they comply with the legislation and technical characteristics established for extractor fans.

All our extractor fans for smoke evacuation comply with European standard EN 12101-3:2002/AC:2006 "Powered smoke and heat exhaust ventilators for use in Construction Works", and are certified by an independent laboratory and accredited by the European directives.

# CERTIFIED EXTRACTOR FANS

## FOR SMOKE EVACUATION IN THE EVENT OF FIRE

### *Smoke evacuation in: CAR PARKS*

Smoke evacuation method with certified extractor fans for operating at high temperatures for a certain length of time, based on their classification and certification. This method is normally applied in buildings, shopping centres, tunnels, car parks and other large constructions with vast open areas, in industrial warehouses with a high risk of fire, and for smoke extraction in industrial kitchens.

## EXAMPLES OF APPLICATION

### Smoke evacuation in: INDUSTRIAL KITCHENS

Extractor fans suitable for use in industrial kitchens

For the correct application of the standard:

- C.T.E. Código Técnico de la Edificación (Technical Building Code). Basic Document SI on fire safety. Basic Document HS on health and safety.

### Smoke evacuation in: INDUSTRIAL WAREHOUSES

Extractor fans suitable for use in industrial warehouses

For the correct application of the standard:

- Regulations governing Fire Protection in Industrial Establishments, Royal Decree 2267/2004, EN-23585:2004 Fire Protection

### Smoke control by differential pressure systems for: EVACUATION ROUTES

The overpressure smoke control method consists of pressurisation by injecting air into spaces which are used as escape routes by people in the case of fire, such as stairwells, corridors, passageways, lifts, etc., especially in tall buildings with large occupancy. The method is based on smoke control by the air speed and the artificial barrier created by air overpressure on the smoke, preventing it from entering the escape routes. In accordance with the EN-12101-6-2006 standards:

## VENTILATION IN CAR PARKS

### IMPULSE VENTILATION

As an alternative to traditional ventilation systems, in recent years horizontal ventilation systems (also known as impulse or induction ventilation systems) have been implemented, using extraction duct networks and the supply of air.

This new technique is based on the reproduction of longitudinal ventilation systems used in tunnels, creating an air front with a speed that is sufficient to provoke a sweep of the area to be ventilated.

The installation of fans at the air and smoke inlet and outlet points gives rise to the induction phenomenon, extracting the mass of air/smoke to the exterior.

This ventilation system is based on the impulsion of a small quantity of air at high speed, which generates a homogenisation effect on the rest of the air.

In addition, the system makes it possible to maintain really low contaminant gas levels, without having to start up the entire car park ventilation system.

By putting just two inductive fans into operation, or designing sector-based or phase ventilation systems and using a gas detection system, it is possible to achieve lower power consumption, less noise and extend the useful life of the equipment.

Impulse ventilation also enables the design of smoke-control systems in the event of fire in accordance with the three objectives set by the British and Belgian standards, which constitute the basis used by the European Standardisation Committee to draft the future European Standard on Car Park Smoke Control, EN 12101-11:

- Smoke extraction during and after fire (smoke clearance)
- Facilitate the work of the fire service (fire fighting)
- Facilitate the safe evacuation of occupants (means of escape)

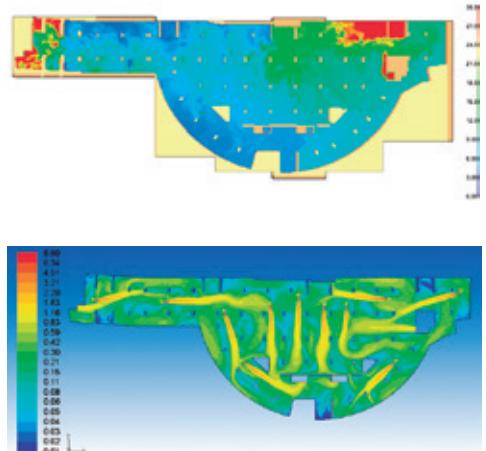

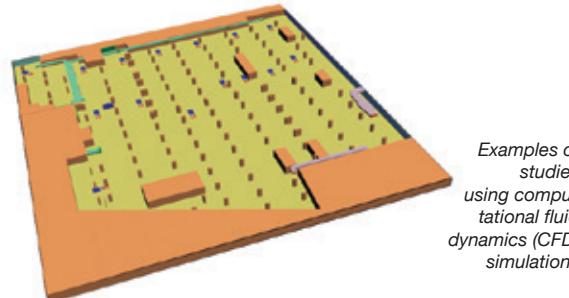

### SYSTEM BENEFITS

The two most important benefits of the impulse or induction ventilation system are:

- Maintaining of a low contaminant gas concentration level
- Increased safety in smoke control in the event of fire

Furthermore, these systems have the following additional benefits.

- They are faster and easier to install and generate less interference with other systems (sprinkler networks, electric ducts, drains)
- Lower occupancy under the slab, thus facilitating the installation of the ventilation system in car parks with lower heights and a reduction in excavation costs.
- Greater visibility in the car park, with the ensuing improved performance of CCTV systems.
- Reduction in the use of the ventilation system, as the fans do not have to overcome duct load losses, with fewer start-ups and hours of operation.

# THT

## 400 °C/2h and 300 °C/2h tubular axial extractor fans

400 °C/2h tubular axial extractor fans with short casings for immersed operation in fire risk zones.

### Fan:

- Sheet steel tubular casing.
- Cast aluminium orientable rotors.
- Approved in accordance with standard EN-12101-3-2002.
- Airflow direction from Motor to Impeller.

### Motor:

- Class H motors, S1 continuous operation and S2 emergency use, with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: S1 continuous operation -20 °C +40 °C, S2 operation 300 °C/2h, 400 °C/2h.

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Long case fans fitted with an inspection hatch.
- Rotors 100 % reversible.

## Acoustic characteristics

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the rotor diameter, with a minimum of 1.5 m.

Sound power spectrum Lw(A) in dB(A) per Hz frequency band

## SELECTION EXAMPLE

### Characteristic curves

Q= Flow rate in m<sup>3</sup>/h, m<sup>3</sup>/s and cfm.

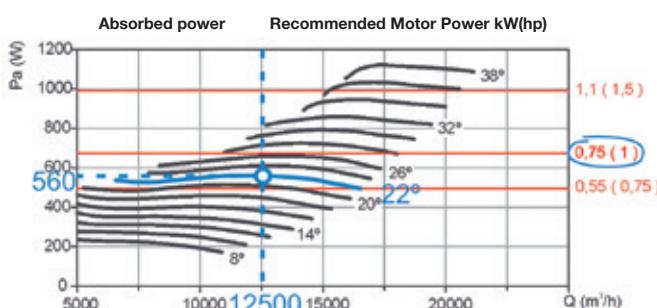

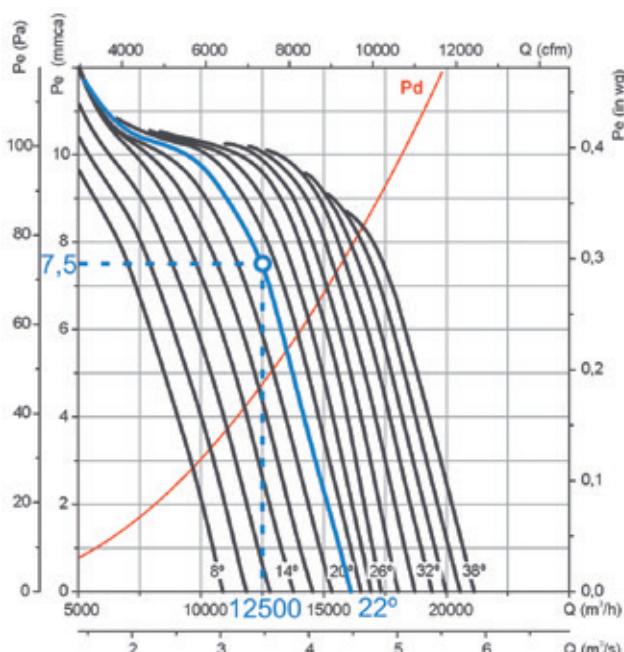

P<sub>e</sub>= Static pressure in mmH<sub>2</sub>O, Pa and inwg.

**Rotor diameter (cm): 71**

**Number of poles: 6**

**THT CJTHT**

**Number of blades: 6**

### Starting data

- Working point:
- Flow rate: 12,500 m<sup>3</sup>/h
- Load loss: 7.5 mm H<sub>2</sub>O

### Equipment selection steps

#### On the pressure graph:

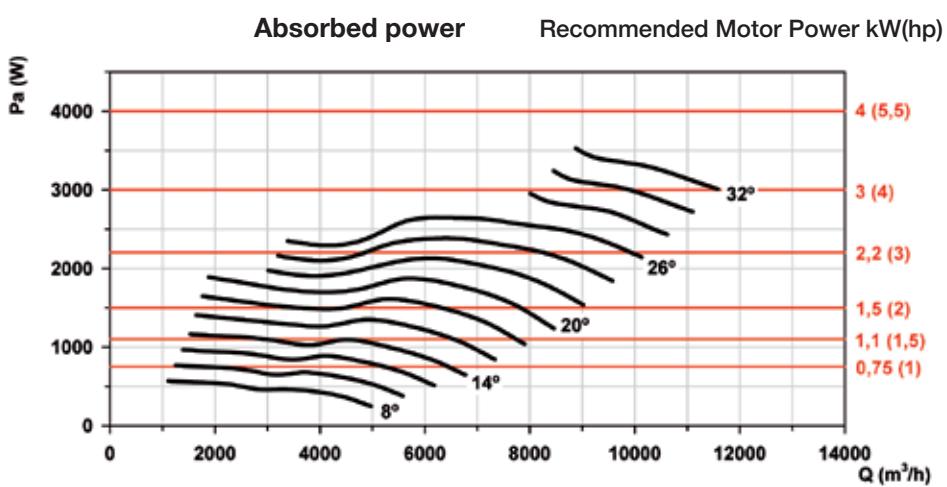

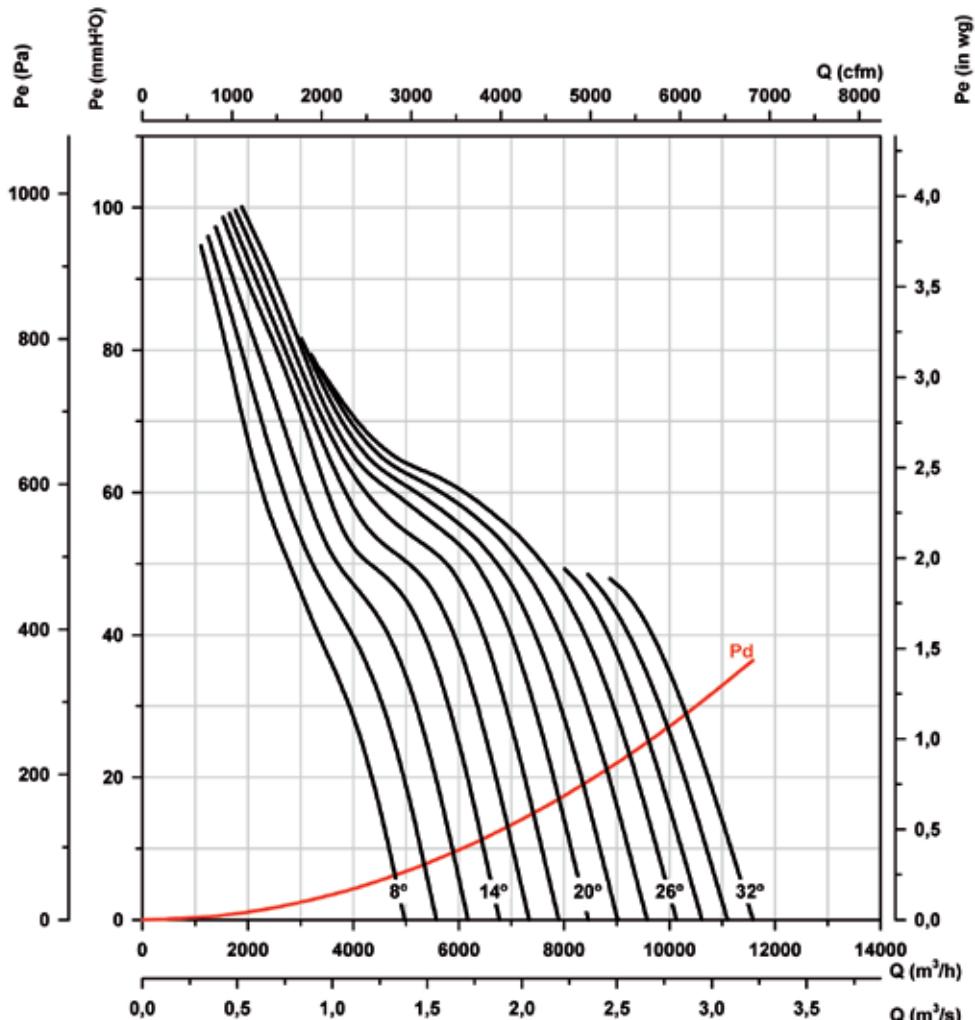

1. Mark the working point defined by the flow rate (12,500 m<sup>3</sup>/h) and the load loss (7.5 mm H<sub>2</sub>O).
2. Select the nearest equipment curve above the working point. In this case, a blade angle curve of 22° is obtained.

#### On the power graph:

3. Mark the working point defined by the working flow rate (12,500 m<sup>3</sup>/h) and the selected blade angle curve (22°).
4. Read the absorbed power on the left power axis. Pa= 560 W at the working point.
5. Find the nearest straight red line above the working point. The installed motor power is given on the right side of the graph. In this case, 0.75 kW or 1 hp.

# CJTHT

## Axial fans 400°C/2h and 300°C/2h With soundproofed box

Extraction units with axial fans to work inside fire danger zones.

### Fan:

- Sheet steel long casing fan.
- Galvanised sheet steel structure with thermal insulation and soundproofing.
- Variable angle impellers in cast aluminium.
- Approved in accordance with standard EN 12101-3, with certifications: 0370-CPR-0312 (F-400) and 0370-CPR-0974 (F-300).

### Motor:

- Class H motors, ongoing use S1 and emergency use S2. With ball bearings, IP55 protection, and one-or two-speed depending on the model
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: S1 continuous operation -20°C +40°C. S2 operation, 300°C/2h, 400°C/2h.

### On request:

- Airflow direction from impeller to motor
- 100% reversible impellers.

### Finish:

- Fan: Anti-corrosive finish in polyester resin, polymerised at 190°C after phosphate free pre-treatment
- Box: Anti-corrosive in galvanised sheet steel

### Order code

From size 40 to size 100

**CJTHT — 56 — 4T — 2 — F-400 — 60Hz**

CJTHT: 400°C/2h and 300°C/2h axial extraction units with soundproofed box

Impeller diameter in cm.

Number of motor pole

2=2900 r/min. 50 Hz  
4=1400 r/min. 50 Hz  
6=900 r/min. 50 Hz  
8=750 r/min. 50 Hz  
12=500 r/min. 50 Hz

T=Three-phase

Motor power (HP)

F-300 Officially approved, tested for 300°C/2h  
F-400 Officially approved 400°C/2h

Size 125

**CJTHT — 125 — 4T / — 9-10 — 15 — F-400 — 60Hz**

CJTHT: 400°C/2h and 300°C/2h axial extraction units with soundproofed box

Impeller diameter in cm.

Number of motor pole

2=2900 r/min. 50 Hz  
4=1400 r/min. 50 Hz  
6=900 r/min. 50 Hz  
8=750 r/min. 50 Hz  
12=500 r/min. 50 Hz

T=Three-phase

Number of blades

Angle of inclination of the blades

Motor power (HP)

F-300 Officially approved, tested for 300°C/2h  
F-400 Officially approved 400°C/2h

## Acoustic features

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

## 400 °C/2h and 300 °C/2h long range one-way or reversible jet fans

300 °C/2h and 400 °C/2h long range one-way or reversible jet fans with a circular (THT/IMP-C), octagonal (THT/IMP-L) or octagonal painted (THT/IMP-O) design

### Fan:

- One-way or reversible fan unit including fan, silencers, deflectors and support, approved for smoke extraction in accordance with standard EN 12101-3, with certification no.: 0370-CPR-0394
- Adjustable rotors made of cast aluminium and designed to produce great thrusts.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Deflector to increase the air range on the impulsion side. Reversible models are fitted with deflectors on both sides.
- High attenuation silencers with thermal and acoustic insulation.
- IAT series safety switch built into the fan (THT/IMP-L and THT/IMP-O) or on request (THT/IMP-C).
- Air direction from Motor to Impeller or 100 % reversible.
- THT/IMP-C: Circular casing in painted sheet steel.
- THT/IMP-L: Galvanised sheet steel casing.
- THT/IMP-O: Painted steel casing.
- THT/IMP-LS: Short length galvanised sheet steel casing.

### Motor:

- Class H motors, S1 continuous operation and S2 emergency use, with ball bearings, IP55 protection and 2 speeds.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: S1 continuous operation -20 °C +40 °C, S2 operation 300 °C/2h and 400 °C/2h.

Deflector for increasing range

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment (THT/IMP-C, THT/IMP-O) or with a galvanised sheet steel anticorrosive finish (THT/IMP-L).

### On request:

- Thrust features different from those indicated.
- Version for outdoor operation in the fire risk zone (see HCT/IMP series).

### For use in garages

Installation of jet fans for immersed operation in fire risk zones

### Accessories

**CI**

**Long-range 300 °C/2h and 400 °C/2h centrifugal induction jet fans for use in fire risk zones with a low profile.**

External junction box.  
Support feet

Long-range 300 °C/2h and 400 °C/2h centrifugal induction jet fans for use in fire risk zones with a low profile.

Fan:

- Sheet steel casing.
- Impeller with reaction blades in extremely robust sheet steel.
- External junction box.
- Support feet included.

Motor:

- Class H motors, S1 continuous operation and S2 emergency use, with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: S1 continuous operation -20 °C +40 °C, S2 operation 300 °C/2h and 400 °C/2h.

Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Version for outdoor operation in the fire risk zone (see CI-CO series)

**400 °C/2h (F-400) and 300 °C/2h (F-300) rated roof-mounted multifunctional extractor fans**

400 °C/2h rated roof-mounted multifunctional extractor fans for work in fire risk zones, designed for smoke extraction in industrial or similar buildings

Fan:

- Painted, galvanised sheet steel support base.
- Cast aluminium orientable rotors.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Painted, galvanised sheet steel rain cap, with natural air outlet. Approved based on standard EN 12101-3, with certificate no. 0370-CPR-0544.

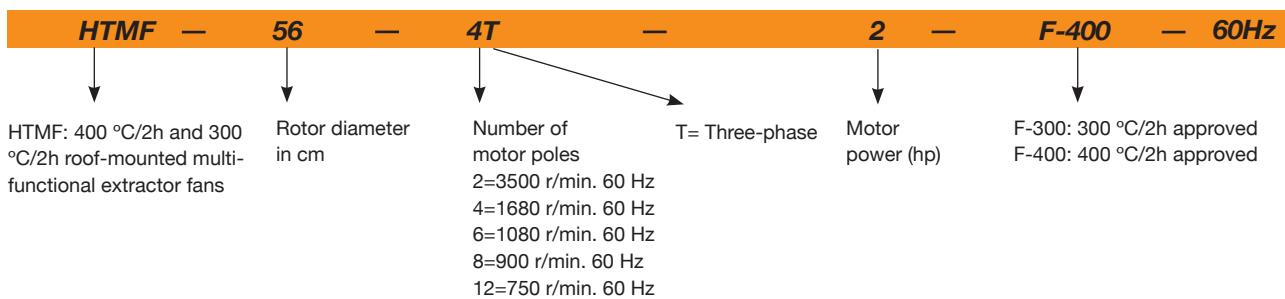

Motor:

- Class H motors, S1 continuous operation and S2 emergency use, with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: S1 continuous operation -20 °C +40 °C, S2 operation 300 °C/2h, 400 °C/2h.

Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

(1) The noise level values are pressures in dB(A) measured at a distance of 6 metres in a free field.

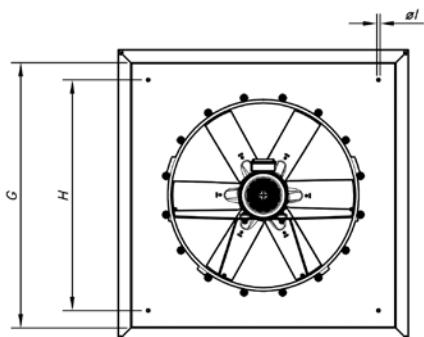

### Acoustic characteristics

Values taken during intake with maximum flow rate

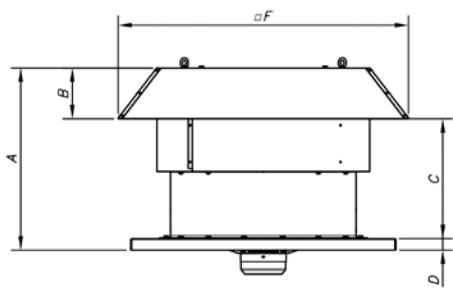

Values taken during discharge with maximum flow rate

Sound power spectrum Lw(A) in dB(A) per Hz frequency band.

# THT/ROOF

## 400 °C/2h and 300 °C/2h roof-mounted axial extractor fans with vertical air outlet

Roof-mounted axial extractor fans with vertical air outlet, for work in fire risk zones, designed for smoke extraction in industrial or similar buildings.

### Fan:

- Galvanised sheet steel support base with anti-corrosive treatment.
- Cast aluminium orientable rotors.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Anti-return hatch in aluminium sheet metal to prevent the entry of water when the fan is not operating.
- Approved in accordance with standard EN 12101-3. With 0370-CPR-0305 (F400) and 0370-CPR-0973 (F300) certifications.
- Airflow direction from Motor to Impeller.

### Motor:

- Class H motors for S1 continuous operation and S2 emergency use. With ball bearings and class IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: S1 continuous operation -20 °C +40 °C. S2 operation, 300 °C/2h, 400 °C/2h.

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Extractor fans with 2-speed motors.
- 2 and 8-pole fans depending on diameter.

## 400 °C/2h centrifugal extractor fans and extractor fan units with reaction impeller

TCR/R: 400 °C/2h centrifugal, single inlet extractor fans for operation outside the fire risk zone, with extreme robustness and fitted with a backward-curved impeller

CJTCR/R: Extremely robust 400 °C/2h single inlet extractor fan units with acoustically insulated box, for outdoor operation in fire risk zones

### Fan:

- Sheet steel casing.
- Impeller with reaction blades in robust sheet steel, coated with heat resistant paint.
- Approved in accordance with standard EN 12101-3, with certificate no.: 0370-CPR-0400 (TCR/R) and 0370-CPR-0401 (CJTCR/R).

### Motor:

- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: S1 continuous operation -20 °C +250 °C, S2 operation 300 °C/2h and 400 °C/2h.

*Extremely robust,  
high performance  
reaction impeller*

### Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.
- CJTCR/R: Anti-corrosive finished galvanised sheet steel.

### On request:

- Extractor fans with 2-speed motors.
- Belt-driven extractor fans.

### Order code

TCR/R	—	1650	—	4T	—	F-400	—	60Hz
TCR/R: 400 °C/2h centrifugal extractor fans with reaction impeller		Impeller size		Number of motor poles 2=3500 r/min. 60 Hz 4=1680 r/min. 60 Hz 6=1080 r/min. 60 Hz 8=900 r/min. 60 Hz 12=750 r/min. 60 Hz	T=Three-phase	F-400: 400 °C/2h approved		
CJTCR/R: 400 °C/2h extractor fan units with reaction impeller						For S2 operation: 300 °C/2h and 400 °C/2h

**Acoustic characteristics**

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the impeller diameter, with a minimum of 1.5 m.

Sound power spectrum Lw(A) in dB(A) per Hz frequency band

## 400 °C/2h belt-driven double inlet extractor fan units

400 °C/2h extractor fan units, with motor and transmission mounted inside the box, for outdoor operation in fire risk zones.

### Fan:

- Galvanised sheet steel structure.
- Forward-curved impeller made of galvanised sheet steel.
- Approved in accordance with standard EN 12101-3, with certificate no.: 0370-CPR-0468.
- Linear air flow direction.

### Motor:

- Class F motors with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: S1 continuous operation -20 °C +120 °C, S2 operation 300 °C/2h and 400 °C/2h.

### Finish:

- Anti-corrosive finished galvanised sheet steel.

### On request:

- Vertical outlet extractor fans

## 400 °C/2h, belt-driven extractor fan units with single inlet fans

400 °C/2h extractor fan units, with motor mounted outside the airflow path, for operation outside the fire risk zone

Fan:

- Galvanised sheet steel structure.
- Forward-curved impeller made of galvanised sheet steel.
- Approved in accordance with standard EN 12101-3, with certificate no.: 0370-CPR-0503

Motor:

- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: S1 continuous operation -20 °C +120 °C, S2 operation 300 °C/2h and 400 °C/2h.

Finish:

- Anti-corrosive finished galvanised sheet steel.

On request:

- Extractor fans with 2-speed motors.
- Vertical outlet extractor fans.

### Accessories

# CSX

**400 °C/2h, belt-driven centrifugal fans for outdoor operation in the fire risk zone fitted with a reaction impeller**

*Extremely robust, high performance reaction impeller*

400 °C/2h, belt-driven centrifugal extractor fans with reaction impeller fitted with electric motors and a standardised set of pulleys, belts and protectors in accordance with standard ISO-13857

Fan:

- Sheet steel casing.
- Impeller with reaction blades made of sheet steel.
- Approved in accordance with standard EN 12101-3:2002/AC:2006 with certification number 0370-CPR-1577.
- Standardised set of pulleys, belts and protectors in accordance with standard ISO-13857.

Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: -20 °C + 150 °C.

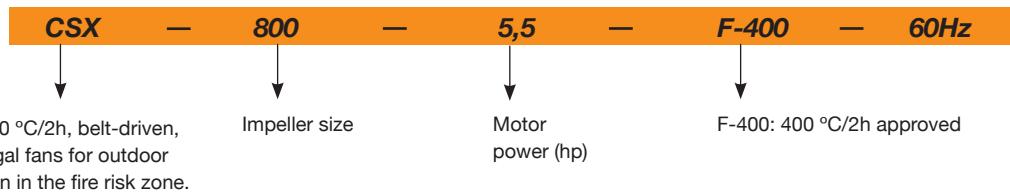

Finish:

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Special windings for different voltages.

# PRESSURISATION CONTROL SYSTEMS

SODECA pressurization control systems have been designed in accordance with European standards and with European standard "EN 12101-6 Smoke and heat control systems: Specifications for differential pressure systems"

The overpressure smoke control method consists of pressurisation by injecting air into spaces which are used as escape routes by people in the case of fire, such as stairwells, corridors, passageways, lifts, etc. This method is based on smoke control by means of the speed of air and the artificial barrier created by the overpressure.

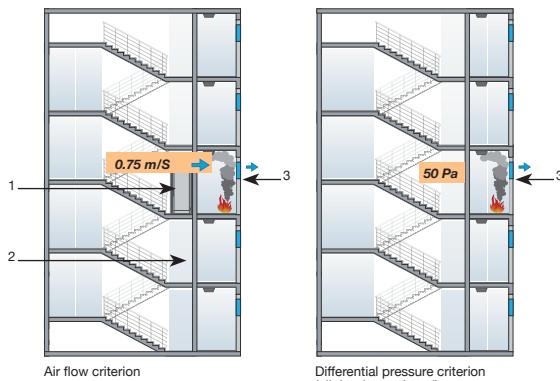

In accordance with the European standard, there are different classes of differential pressure systems in buildings, depending on their use.

System class	Examples of use
Class A system:	As a means of escape. On-site protection:
Class B system:	As a means of escape and fire fighting
Class C system:	As a means of escape via simultaneous evacuation
Class D system:	As a means of escape. Risk to persons who are sleeping
Class E system:	As a means of escape with evacuation in phases
Class F system:	Fire protection system and means of escape:

In selecting and classifying the system for each specific case, it is necessary to consider the building use, size and evacuation instructions in the event of fire, as this choice will determine the necessary flow rate delivered by the pressurisation equipment. It is very important to pay special attention to the choice of the system as, depending on its class, different flow rates will be required.

# SYSTEM CLASSES

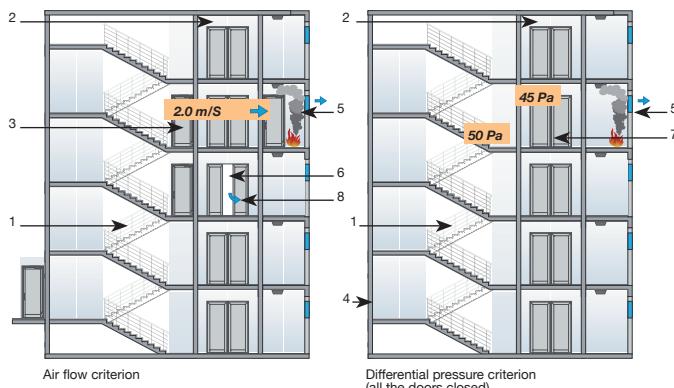

## CLASS A SYSTEM

The project conditions are based on assuming that the building will not be evacuated unless it is directly threatened by the fire.

The level of compartmentalisation of the fire is normally safe for the occupants who remain inside the building.

Therefore it is not very likely that more than one door will be open at the same time in the protected space (either between the stairs and the lobby / corridor or the final exit door).

- 1. Door open
  - 2. Door closed
  - 3. Air emission flow
- \*An open door may indicate a free passage of air through one lobby

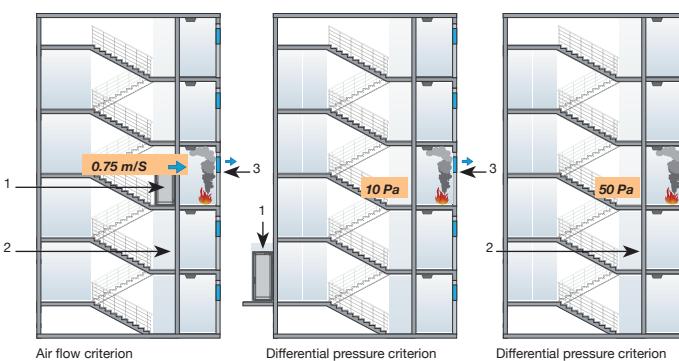

## CLASS B SYSTEM

A class B differential pressure system may be used to minimise the possibility of serious smoke contamination of the fire control stations during the evacuation of persons and while the fire fighters are extinguishing the fire.

During the extinguishing operations, it will be necessary to open the door between the lobby and the living quarters to fight a potentially developed fire.

- 1. Fire stairs
- 2. Fire fighting lobbies
- 3. Door open
- 4. Door closed
- 5. Air exhaust openings
- 6. Door open (fire fighting lobbies)
- 7. Door closed (fire fighting lobbies)
- 8. Air flow from fire fighter lift shaft

## CLASS C SYSTEM

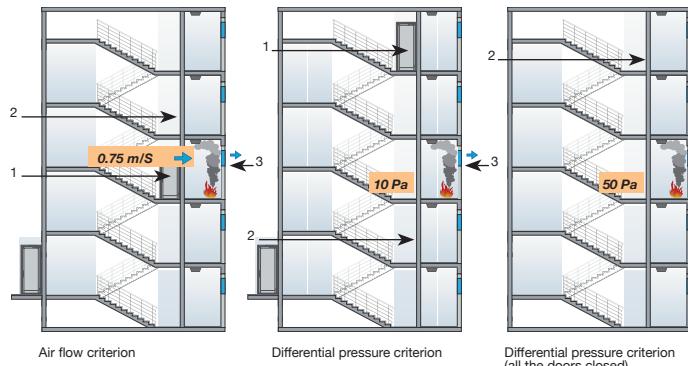

Class C systems are designed for all the occupants of the building to be evacuated at once when the fire alarm is activated.

In the case of a simultaneous evacuation, it is assumed that the staircase will be occupied for the normal evacuation period and then be free of people. Thus, the evacuation will take place during the first stages of the fire development, and during this period, it is accepted that a certain volume of smoke may reach the staircase.

The air flow contributed by the pressurization system can eliminate that smoke from the staircase.

It is assumed that during the evacuation, the occupants will remain alert and ready, and be familiar with the area in which they are moving, with the ensuing reduction of the time they remain inside the building.

- 1. Door open
  - 2. Door closed
  - 3. Air exhaust openings
- \*The figure may include lobbies

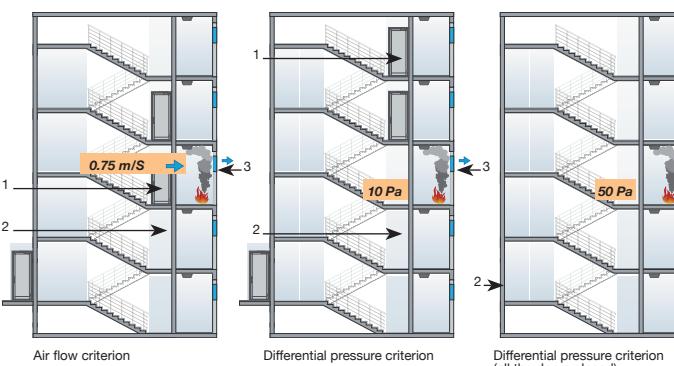

## CLASS D SYSTEM:

Class D systems are designed for buildings where the occupants may be sleeping, for example, hotels, shelters and boarding establishments. The time necessary for the occupants to move in a protected space before reaching the final exit may be longer than that expected in the case of persons who are awake and in good physical condition, and the occupants may not be familiar with the building or need help to reach the final exit / protected space.

1. Door open
2. Door closed
3. Air exhaust openings  
\*The figure may include lobbies

1. Door open
2. Door closed
3. Air exhaust openings  
\*The figure may include lobbies

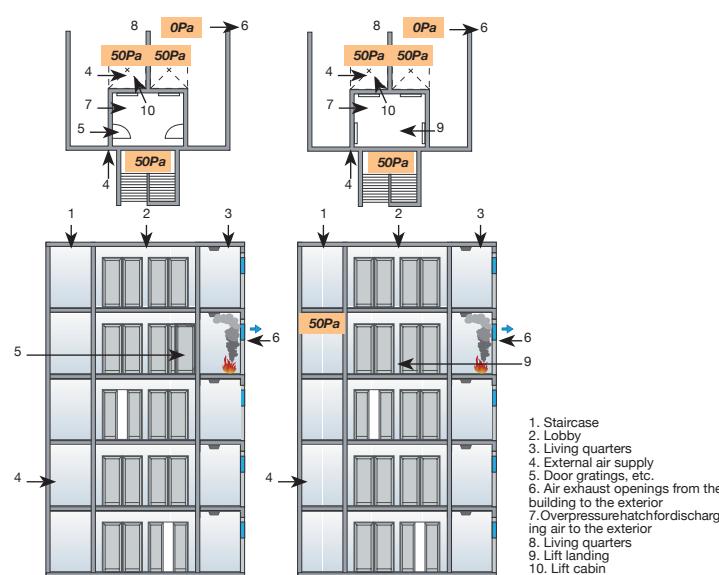

## CLASS E SYSTEM

They are used in buildings where fire evacuation is done by phases or as staggered evacuations.

In "evacuation by phases" it is considered that the building would still be occupied for a considerable time while the fire is developing, and so higher fire loads must be considered and hence, a larger volume of smoke and hot gases. (These factors may vary considerably, depending on the type of material in combustion, the fire load generated by them and the load geometry).

In such a situation, the protected staircases must be kept free of smoke to allow the safe evacuation of the people occupying the floors where there is no fire.

## CLASS F SYSTEM

Class F differential pressure systems are used to minimise the possibility of serious smoke contamination of the staircases that are used by fire fighters while the building is being evacuated and while the fire fighters are extinguishing the fire.

During the extinguishing operations, it will be necessary to open the door between the lobby and the living quarters to fight a potentially developed fire.

This system must be designed so that the stairwell and lift shaft (if any) remain free of smoke. If the smoke enters the lobby, the staircase pressure must not lead the smoke to the shaft, and vice versa.

### Differential pressure criterion

SYSTEM CLASS	A	B	C	D	E	F
Differential pressure between staircase and living quarters (all the doors closed)	50 Pa	50 Pa	50 Pa	50 Pa	50 Pa	50 Pa
Differential pressure on both sides of the living quarters door (final exit door open)	-	-	10 Pa	10 Pa	10 Pa	-
Doors open (differential pressure criterion) Final exit to exterior	NO	NO	YES	YES	YES	NO
Doors open (differential pressure criterion) Fire floor	NO	NO	NO	NO	NO	NO
Doors open (differential pressure criterion) No. of floors other than fire floor	0	0	0	1	2	0
Differential pressure (between lobby and living quarters)	45 Pa*	45 Pa	45 Pa*	45 Pa*	45 Pa*	45 Pa
Differential pressure (between life shaft and living quarters)	-	50 Pa	-	-	-	50 Pa

### Air flow criterion

SYSTEM CLASS	A	B	C	D	E	F	Situation 1	Situation 2
Air speed at fire floor door (doors open)	-	2 m/S	0.75 m/S	0.75 m/S	0.75 m/S	-	1 m/S	
Air speed at fire floor staircase (doors open)	0.75 m/S	-	-	-	-	-	2 m/S	-
Doors open Final exit to exterior	NO	YES	NO	YES	YES	YES	YES	YES
Doors open Lift	NO	YES	NO	NO	NO	YES	NO	
Doors open Staircase – fire floor lobby	YES	YES	YES	YES	YES	YES	NO	
Doors open Staircase – lobby on floor other than fire floor	NO	YES	NO	NO	NO	YES	NO	
Doors open Fire floor	YES	YES	YES	YES	YES	YES	YES	YES
Doors open No. of floors other than fire floor	0	0	0	0	1	0	0	

\*It is not mandatory to pressurise the lobby if it only has doors connecting it with the staircase and floors.

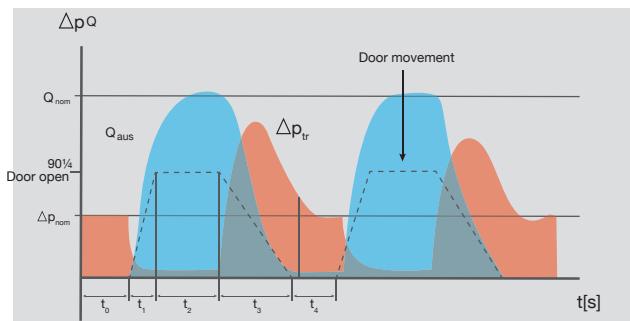

## Response time

All the systems must be designed so that the force to be applied to the door handle to open it does not exceed 100N.

The SODECA equipment has next-generation, built-in controls that meet the most stringent requirements and are extremely reliable in the face of changes in situation that may occur during a fire, and in "chaotic" evacuation situations in which doors between fire zones and in pressurised smoke-free areas are opened and closed at random. Our systems react quickly and precisely to such changes, always ensuring an Overpressure of 50Pa for closed doors and maintaining the required air speed in each open door situation. This response capacity guarantees that the force used to open a door does not exceed 100N, as set out in European standards.

The SODECA equipment fully complies with the following reaction times:

t1: Opening of door (1 second)

t2: Door open. The system delivers 100% of the necessary flow rate in less than 6 seconds

t3: Closing of door (3 seconds)

t4: Door closed. The system acquires the nominal pressure in less than 6 seconds, thus preventing prolonged excess pressure and ensuring that the force used on the door handle is no greater than 100N.

Q= Flow rate  
P= Pressure

## Examples of application

The SODECA systems offer different types of equipment to satisfy all installation needs, depending on the building in which the pressurisation control system is used.

When selecting the equipment, it is important to consider where it will be installed and determine the intake of external air and its impulsion to the pressurised zone, based on the following recommendations:

### Intake of external air

The external air inlet must be far from areas where there is a risk of fire, to ensure the entry of clean air through the pressurization system. In the event of an indoor installation, two air intakes will be needed, at a considerable distance from each other, and fitted with smoke detection systems so that if smoke enters through one of the nozzles, it can be closed automatically by a motorised damper (KIT DAMPER) or another equivalent system.

### Impulsion of air to the interior

A single air impulsion point to the pressurised zone is accepted for buildings less than 11 metres in height. For taller buildings, an air entry point must be provided for every three floors, using for example diffusers and an air conduit throughout the entire staircase.

## REAL-LIFE SIMULATION TESTS

All the equipment manufactured by SODECA is subject to stringent tests in real-life simulations using our installations and our test camera with fire doors, motorised dampers for leakage simulation and fire rated door opening/closing operations, in accordance with standard EN-12101-6 Smoke and heat control systems: Specifications for differential pressure systems

Equipment certified by independent laboratories

Certified: NR331151

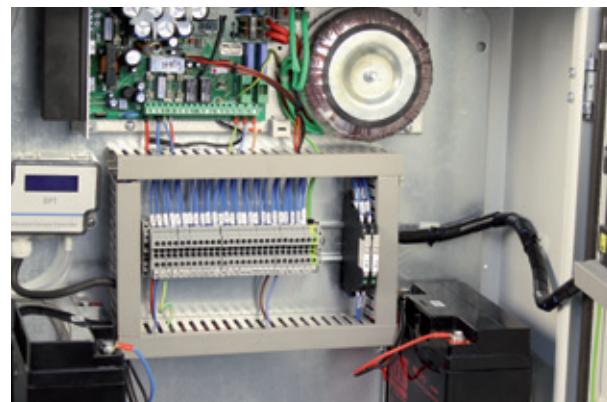

EN-12101-6  
Smoke and heat control  
systems: Specifications  
for differential pressure systems

## REMOTE CONNECT START CONTROL

SODECA goes one step further, adapting to new market needs and offering a response to new technological demands. Our systems include advanced options and connectivity to facilitate the supervision and maintenance of the equipment, once installed in any building.

Any BMS (Building Management System) system can be connected to our equipment via the Modbus protocol, allowing end users or maintenance services to supervise the status and correct operation of the systems at all times.

# KIT SOBREPRESIÓN

**The staircase, escape routes or confinement pressurization system enables automatic control of the flow rate and the maintenance of a differential pressure of 50 Pa in a single phase, based on standard UNE EN 12101-6-2006**

STAIRCASE OVERPRESSURE KIT  
For three-phase equipment

STAIRCASE OVERPRESSURE KIT  
For single-phase equipment

OVERPRESSURE KIT WITH RESERVE FAN

## STAIRCASE OVERPRESSURE KIT

- Staircase overpressure kit comprised of a control panel (BOXPRES KIT) and impulsion units (CJHCH or CJBD), for pressurising staircases and escape routes. Also available for NEOLINEO AND CJBC single-phase equipment.

## OVERPRESSURE KIT WITH RESERVE FAN

- Overpressure kit with reserve fan comprised of a control panel (BOXPRES KIT II) with a built-in automatic switching system that maintains the overpressure in the event of a failure in the main fan and air impulsion units with a TWIN or CJHCH/DUPLEX series reserve fan.

## BOXPRES

- Easy to install
- A compact, autonomous solution
- Preventive maintenance
- Easy start-up
- Safe, functional installation

- The correct operation of the pressurization systems depends not only on their sound design, but also on the correct regulation performed by the system. For this reason, it is extremely important to have calibrated, high precision regulation elements that will permit both situations present in the event of a fire to be maintained simultaneously, quickly and stably.
- The BOXPRES control panel not only complies with the strictest requirements, it simplifies the work for the installer.

It includes:

- A frequency changer programmed at 50 Pa.
- A differential pressure probe.
- A magnetothermal switch.
- A line and failure led lamp.
- A check push button.

All the BOXPRES equipment interconnections have been made and tested.

- Ready to operate and execute its function of controlling the installation pressure.
- Option of checking the installation to prevent failures.
- Only the power supply line, impulsion fan and fire signal need to be connected.

The single-phase panels include:

- A voltage adjuster programmed at 50 Pa.
- A differential pressure probe outside the equipment.

**Example of application**

The overpressure smoke control method consists of pressurisation by injecting air into spaces which are used as escape routes by people in the case of fire, such as stairwells, corridors, passageways, lifts, etc., especially in tall buildings with large occupancy. The method is based on smoke control by the air speed and the artificial barrier created by air overpressure on the smoke, preventing it from entering the escape routes.

# KIT BOXPDS

**Pressurisation equipment for staircases, escape routes and fire fighting lobbies, pursuant to European standard EN 12101-6**

Pressurisation equipment for escape routes in the event of a fire, pursuant to the requirements of European standard EN 12101-6. The KIT BOXPDS automatically regulates the air flow and is able to maintain the 50 Pa overpressure, even in the present of leakages in the installation. The system can maintain the overpressure (pressure criteria) and a speed of 0.75 m/s in an open door situation (airflow criteria) almost immediately.

## KIT BOXPDS

- It is comprised of the BOXPDS control panel, a CJHCH ventilation unit and a Kit Damper with a built-in optical smoke sensor.

- Easy to install
- A compact, autonomous solution
- Preventive maintenance
- Easy start-up
- Safe, functional installation

BOXPDS

## BOXPDS

- Variable Frequency Drive.
- High precision differential pressure probe.
- Electrical panel with magneto thermal protections and general power supply failure indication.
- Electronic control for the management of alarms, maintenance, ModBUS RTU port for BMS (Building management systems) connection and DAMPER control.
- Certified power supply with batteries to ensure power supply to control equipment in the event of a power failure.

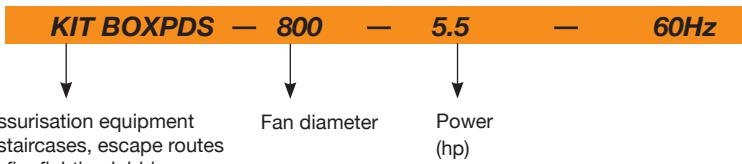

### Control panel:

- External control panel for real-time viewing of pressure, alarm pilot lamps and manual system activation

**DAMPER**

Next to ventilation unit

In intake conduit

Next to ventilation unit

Two dampers can be used by installing two intake points at a considerable distance from the fan, so that one of the points is always in the open position and the other closed. In the event of smoke being detected in the intake nozzle with an open damper, the damper closes and the second damper opens to ensure the entry of clean air into the space to be protected (smoke-free escape route).

# HATCH PDS

**Pressurisation equipment for staircases, escape routes and fire fighting lobbies, pursuant to European standard EN 12101-6**

Pressurisation equipment for escape routes in the event of a fire, pursuant to the requirements of European standard EN 12101-6. The HATCH PDS automatically regulates the air flow and is able to maintain the 50 Pa overpressure, even in the present of leakages in the installation. The system can maintain the overpressure (pressure criteria) and a speed of 0.75 m/s in an open door situation (airflow criteria) almost immediately.

## HATCH PDS

It is formed by a HATCH-S ventilation unit with a motorized hatch opening function and a BOXPDS control panel.

- An extremely robust structure that is able to withstand severe weather changes.
- Equipment structure made of corrosive-proof galvanised sheet steel.
- Water-tight design to prevent the entry of water.
- Heat insulation to prevent hot air loss in the winter.
- Adaptable skirting for correct, easy installation on the roof.

### Opening system:

- Motorised opening arms, with encapsulated IP-65 mechanism.
- Supply voltage 230 V AC 60Hz or 24V DC.
- Reinforced, guaranteed system with more than 10,000 operations at maximum load.
- Maximum load 1000 Nw.
- Automatic opening via external control system signal (fire station, smoke detector, manual switch...).
- Control systems not included in the supply.
- Manual opening for environmental ventilation via switch.
- Limit switch to signal the hatch position.

### Fan:

- HCT series extractor fans.
- Tubular casing made of sheet steel with polyester resin anti-corrosive treatment.
- Cast aluminium rotors.

### Motor:

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Operating temperature: -25°C +50 °C.

### Finish:

- Anti-corrosive finished galvanised sheet steel.

### On request:

- Fitted with F-300 and F-400 rated fans.
- Reversible pressurisation equipment for smoke evacuation in case of need.
- Polyester resin anti-corrosive paint finish.

## BOXPDS

- Variable Frequency Drive.
- High precision differential pressure sensor.
- Electrical panel with magneto thermal protections and general power supply failure indication.
- Electronic control for the management of alarms, maintenance, ModBUS RTU port for BMS (Building management systems) connection and DAMPER control.
- Certified power supply with batteries to ensure power supply to control equipment in the event of a power failure.

### Control panel:

- External control panel for real-time viewing of pressure, alarm pilot lamps and manual system activation.

# ATEX EXPLOSIVE ATMOSPHERES

All the extractors and fans manufactured by SODECA for explosive atmospheres comply with the requirements of the European ATEX 94/9/EC Directive and have been designed in accordance with standard EN-14986 "Design of fans working in potentially explosive atmospheres". This guarantees product quality and ensures the maximum safety of people and facilities.

## ATEX EXPLOSIVE ATMOSPHERE APPLICATIONS

### Fan design:

In accordance with standard EN-14986 and to prevent ignition in the event of friction or impact between the moving and the static parts, they are made with materials that are compatible with each other to prevent sparks.

### Centrifugal fans:

#### To prevent sparks generated by the impeller:

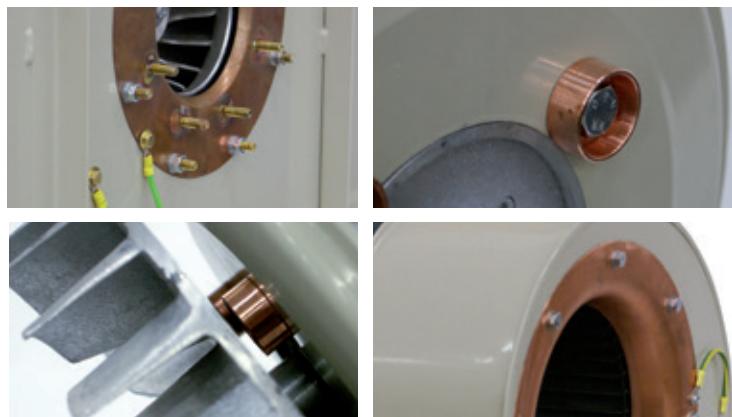

- . Copper intake nozzle
- . Protective bushings to protect the screwed/riveted joints
- . Verification of distances between components

### Axial fans:

#### To prevent sparks generated by the rotor:

- . Copper or aluminium strip over the inner side of the ring
- . Verification of distances between components

Pursuant to the standard, all the fan parts that are not welded together and secured using mechanical means through other systems or are different parts coated with paint that could insulate conductivity are joined by equipotential bonding to prevent differences in power between these non-welded or painted parts.

Since it was first established, Sodeca has specialised in the design and manufacture of fans and their accessories for industrial applications.

The combination of its experience gained over decades of working with fans and the technology provided by the engineers employed in its different departments has allowed Sodeca to occupy a leading international position as a fan manufacturer.

Industrial applications require an important capacity to adapt to the specifications of each project and flexibility in production in order to comply with the real needs of each client.

To comply with this objective, Sodeca has a standard products line and a specially-manufactured products line for building fans that meet the demands of our clients.

In the different projects we can use motors that meet the most stringent market standards:

NEMA super premium efficiency

NEMA premium efficiency

NEMA high efficiency

U.L. motors

C.S.A. motors

# COMPLIANCE WITH STANDARDS

**SODECA fans and extractors comply with the following standards:**

<b>QUALITY</b>	
ISO 9001:2015	Sistemas de gestión de la calidad. Requisitos. Quality management systems -- Requirements
<b>TRIALS</b>	
ISO 5801	Ventiladores industriales. Ensayos de comportamiento en circuitos normalizados. Industrial fans -- Performance testing using standardized airways
AMCA 210-07	Ventiladores industriales. Métodos de ensayos de ventiladores y su representación de ensayos. Laboratory Methods of Testing Fans for Aerodynamic Performance Rating
UNE-EN ISO 5801	Ventiladores. Dispositivos e instalaciones para el ensayo de ventiladores.
UNE-EN ISO 13350	Ventiladores industriales. Ensayos de comportamiento de ventiladores de chorro. Industrial fans -- Performance testing of jet fans
ISO 13348	Industrial fans -- Tolerances, methods of conversion and technical data presentation
<b>HIGH TEMPERATURE FANS</b>	
EN 12101-3	Sistemas de control de humos y calor. Parte 3: Especificaciones para aireadores extractores de humos y calor mecánicos. Smoke and heat control systems - Part 3: Specification for powered smoke and heat exhaust ventilators
<b>ACOUSTICS</b>	
ISO 3744	Acústica. Determinación de los niveles de potencia acústica de fuentes de ruido a partir de la presión acústica. Método de ingeniería para condiciones de campo libre sobre un plano reflectante. Acoustics -- Determination of sound power levels of noise sources using sound pressure -- Engineering method in an essentially free field over a reflecting plane
<b>BALANCING AND VIBRATIONS</b>	
ISO 1940-1	Vibraciones mecánicas. Calidad de equilibrado Mechanical vibration -- Balance quality requirements for rotors in a constant (rigid) state -- Part 1: Specification and verification of balance tolerances
ISO 10816-1	Vibraciones mecánicas. Evaluación de las vibraciones de máquinas Mechanical vibration -- Evaluation of machine vibration by measurements on non-rotating parts -- Part 1: General guidelines
ISO 14694	Ventiladores industriales. Especificaciones para equilibrado y niveles de vibración Industrial fans -- Specifications for balance quality and vibration levels
<b>SAFETY (EC Declaration of Conformity)</b>	
EN ISO 12100	Seguridad de las máquinas. Conceptos básicos, principios generales para el diseño. Parte 1: Terminología básica, metodología. Safety of machinery -- Basic concepts, general principles for design -- Part 1: Basic terminology, methodology
EN ISO 12100	Seguridad de las máquinas. Conceptos básicos, principios generales para el diseño. Parte 2: Principios técnicos. Safety of machinery -- Basic concepts, general principles for design -- Part 2: Technical principles
UNE EN 60204-1	Seguridad de las máquinas. Equipo eléctrico de las máquinas. Parte 1: Requisitos generales. Safety of machinery - Electrical equipment of machines - Part 1: General requirements
ISO 13857	Seguridad de máquinas. Distancias de seguridad para impedir que se alcancen zonas peligrosas con los miembros superiores e inferiores. Safety of machinery -- Safety distances to prevent danger zones being reached by upper and lower limbs

<b>ATEX EXECUTIONS</b>	
ATEX directive 2014/34/UE	Aparatos y sistemas de protección para uso en atmósferas potencialmente explosivas Equipment and protective systems intended for use in potentially explosive atmospheres
EN 14986	Diseño de ventiladores para trabajar en atmósferas potencialmente explosivas. Design of fans working in potentially explosive atmospheres
EN 13463-1	Equipos no eléctricos destinados a atmósferas potencialmente explosivas. Parte 1: Requisitos y metodología básica. Non-electrical equipment for use in potentially explosive atmospheres - Part 1: Basic method and requirements
EN 1127-1	Explosive atmospheres. Prevención y protección contra la explosión. Parte 1: Conceptos básicos y metodología. Explosive atmospheres - Explosion prevention and protection - Part 1: Basic concepts and methodology

## Extractor fans for ATEX EXPLOSIVE ATMOSPHERES

An ATEX zone is an area containing a mixture of air with inflammable **gas**, inflammable liquid **vapour**, combustible liquid **mist** or combustible **dust** and when they ignite, they all do so at once.

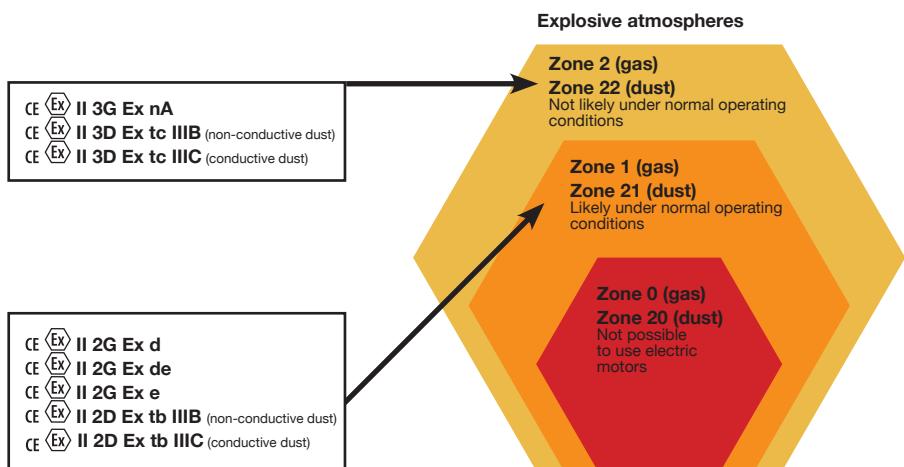

### Sensitivity to gas ignition:

<b>LEL</b>	Lower explosive limit » % volume.
<b>UEL</b>	Upper explosive limit » % volume.
<b>MIE</b>	Minimum ignition energy at » 10-6 µ Joules
<b>Flash Point</b>	Minimum temperature of a liquid forming inflammable gases
<b>Ignition</b>	Temperature at which a gas ignites
<b>Temperature</b>	(T1, T2, T3, T4, T5 y T6)

### Sensitivity to ignition of solids:

<b>LEL or MEC</b>	Minimum explosive concentration » g/m³
<b>LOC</b>	Limiting oxygen concentration » % volume
<b>MIE</b>	Minimum ignition energy at » 10-3 µ Joules
<b>MIT</b>	Minimum ignition temperature in °C: - In a MIT cloud n (cloud of dust in contact with a hot surface). - In a MIT layer c with ignition of a layer of 5 mm. - (limit of T the lesser of: 2/3 of MIT n or MIT c -75 °C)

### Summary of zone definitions

### Definition of zones:

Gases and vapours / Dust:

- Zone 0 / Zone 20:**

Constantly present during long periods of time or frequently.  
Not possible to use electric motors

- Zone 1 / Zone 21:**

Likely under normal operating conditions.

- Zone 2 / Zone 22:**

Not likely that an ATEX zone will be created under normal operating conditions

### Appliance groups and categories:

**GROUP I: equipment for underground and surface mining work with hazards posed by firedamp or explosive dust.**

- Category M1: must remain operative
- Category M2: must be able to shut off the power supply

**GROUP II: Other risk zones**

- Category 1: very high level of protection. Very likely zone.
- Category 2: high level of protection. Likely zone.
- Category 3: normal level of protection. Not a very likely zone.

**Selection of category depending on zone:**

ZONE	CATEGORY
0 or 20	1
1 or 21	1 or 2
2 or 22	1, 2 or 3

**Selection of zone depending on category:**

CATEGORY	ZONE
1	All
2	1, 21, 2 or 22
3	2 or 22

**Explosion group and temperature class**

Explosion group	Temperature class					
	T1	T2	T3	T4	T5	T6
II A	Acetone	Carbon oxide	1-amyl acetate	Gasoline	Acetaldehyde	
	Ethane	Methane	Butane	Otto fuels		
	Ethyl acetate	Methanol	n-butyl alcohol	Aviation fuel		
	Ethyl chloride	Methyl chloride	Cyclohexane	Fuel oils		
	Ammonia	Propane	1,2-dichloroethane	Hexane		
	Benzene	Natural gas	Acetic anhydride			
	Acetic acid	Toluene				
II B			Ethyl alcohol	Hydrogen sulphide	Ethyl ether	
			Ethylene			
			Ethylene oxide			
II C	Hydrogen		Acetylene			Carbon sulphide

**Temperature class and ignition temperature:**

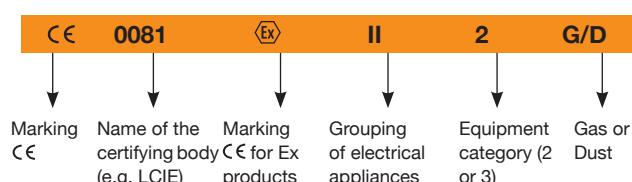

Temperature class	Ignition temperature
T1	>450 °C
T2	>300 °C
T3	>200 °C
T4	>135 °C
T5	>100 °C
T6	>85 °C

**Solid fuel explosive values**

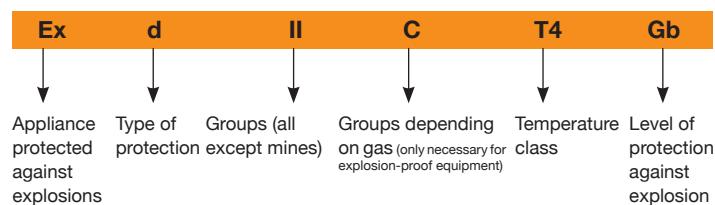

Product	Kmax	Pmax	MIE	LOC	TMIn	TMic
Corn flour	127	6.7	300	--	530	460
Rice flour	40	6.7	>10	--	370	480
Wheat flour	47	8.2	>300	11%	460	470
Malted flour	100	7.8	>10	11%	310	460
Corn starch	143	10.6	>100	9%	440	400
Rice starch	220	10.0	>10	--	470	390
Potato starch	89	9.4	>3000	--	520	570

**ATEX marked**

Motors marked in accordance with ATEX directive

**EN marked**

Additional standard marking for motors

**HCDF: ATEX Ex d-certified axial extractor fans with square frames**

**HDF: ATEX Ex d-certified axial extractor fans with circular frames**

ATEX-certified, wall-mounted (HCDF) or circular (HDF) axial extractor fans with CEE ExII2G Ex d non-sparking motor for working in explosive atmospheres.

Fan:

- Cast aluminium rotor.
- Airflow direction from Motor to Impeller.
- Non-sparking cable gland included.
- HCDF: Support frame in sheet steel with aluminium strip in rotor zone, in accordance with standard EN-14986.
- HCDF: Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- HDF: Support ring made of sheet steel with aluminium strip in rotor zone, in accordance with standard EN-14986.

Motor:

- ATEX-certified, non-sparking Ex "d" IIBT4, class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- HDF: Operating temperature: -20 °C +40 °C.
- HCDF: Operating temperature: -20 °C +50 °C.

Finish:

- Anti-corrosive finish, with non-ferric ATEX paint of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Special windings for different voltages and frequencies.
- ATEX construction for different categories.
- Extractor fans with 2-speed motors.

Aluminium strips to prevent  
sparking in accordance with  
standard EN-14986:2006

### Acoustic characteristics

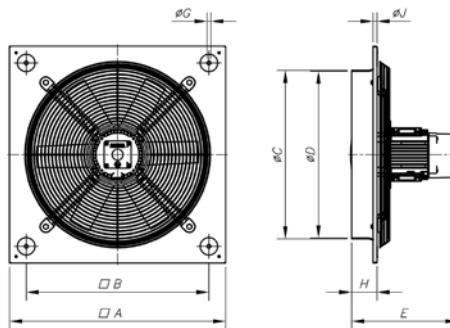

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the rotor diameter, with a minimum of 1.5 m.

Sound power spectrum Lw(A) in dB(A) frequency band in [Hz]

# HCH/ATEX HCT/ATEX

HCH/ATEX

HCT/ATEX

**HCH/ATEX:** Extremely robust, ATEX-certified, wall-mounted axial extractor fans  
**HCT/ATEX:** Extremely robust, ATEX-certified, tubular axial extractor fans

ATEX-certified circular axial (HCH) or tubular (HCT) extractor fans with CEE Ex II 2G Ex e, CEE Ex II 2G Ex d, Ex tc, or Ex tb explosion-proof, non-sparking motors for operating in explosive atmospheres.

Fan:

- HCH/ATEX: Support ring made of sheet steel with aluminium strip in rotor zone, in accordance with standard EN-14986.
- HCT/ATEX: Tubular casing made of sheet steel with aluminium strip in rotor zone, in accordance with standard EN-14986.
- Cast aluminium rotor.
- With built-in inspection hatch (HCT).
- Airflow direction from Motor to Impeller.

Motor:

- ATEX-certified, Ex e explosion-proof, Ex d, Ex tc or Ex tb non-sparking class F motors with ball bearings
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Operating temperature: -20 °C +40 °C.

Ex "e" marking: CEE Ex II 2G Ex e  
 Ex "d" marking: CEE Ex II 2G Ex d  
 Ex tc marking: CEE Ex II 3D Ex tc  
 Ex tb marking: CEE Ex II 2D Ex tb  
 Notified Body: L.O.M.  
 Identification no.:  
 LOM3ATEX0157

Finish:

- Anti-corrosive finish, with non-ferric ATEX paint of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Motors with built-in PTC.
- Special windings for different voltages and frequencies.
- ATEX construction for different categories.
- Extractor fans with 2-speed motors.
- Single-phase, Ex d non-sparking motors.

## ATEX-certified medium pressure centrifugal extractor fans made of cast aluminium

Centrifugal, medium pressure, single intake extractor fans with cast aluminium casing and impeller, for operation in explosive atmospheres.

### Fan:

- Cast aluminium casing.
- Cast aluminium impeller.

### Motor:

- ATEX-certified, class F, Ex "e" explosion-proof or Ex "d" non-sparking motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C +80 °C.

Ex "e" marking: CE Ex II 2G Ex e

Ex "d" marking: CE Ex II 2G Ex d

Ex tc marking: CE Ex II 3D Ex tc

Ex tb marking: CE Ex II 2D Ex tb

Notified Body: L.O.M.

Identification no.:

LOM04ATEX0007

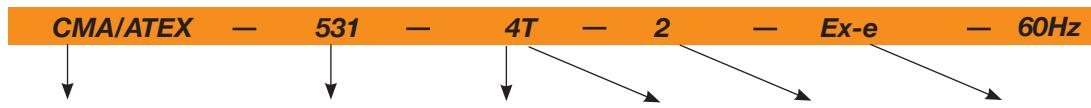

### Finish:

- Anti-corrosive finish, with non-ferric ATEX paint of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

### On request:

- Motors with built-in PTC.
- Special windings for different voltages and frequencies.
- ATEX construction for different categories.

## Order code

ATEX-certified medium pressure centrifugal extractor fans made of cast aluminium.

On request ATEX version construction in stainless steel

**ATEX-certified, medium pressure centrifugal extractor fans fitted with multi-blade impeller.**

Centrifugal, medium pressure, single intake extractor fans with cast aluminium casing and impeller, for operation in explosive atmospheres.

**Fan:**

- Sheet steel casing.
- Forward-curved impeller made of galvanised sheet steel.
- Non-sparking intake ring made of copper or aluminium.
- Maximum temperature of air to be carried: -20 °C +80 °C.

**Motor:**

- ATEX-certified, class F, Ex "e" explosion-proof or Ex "d" non-sparking motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.

**Finish:**

- Anti-corrosive finish, with non-ferric ATEX paint of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

**On request:**

- Motors with built-in PTC.
- Special windings for different voltages and frequencies.
- ATEX construction for different categories.
- Construction entirely of stainless steel.

Ex "e" marking: CE Ex II 2G Ex e

Ex "d" marking: CE Ex II 2G Ex d

**Acoustic characteristics**

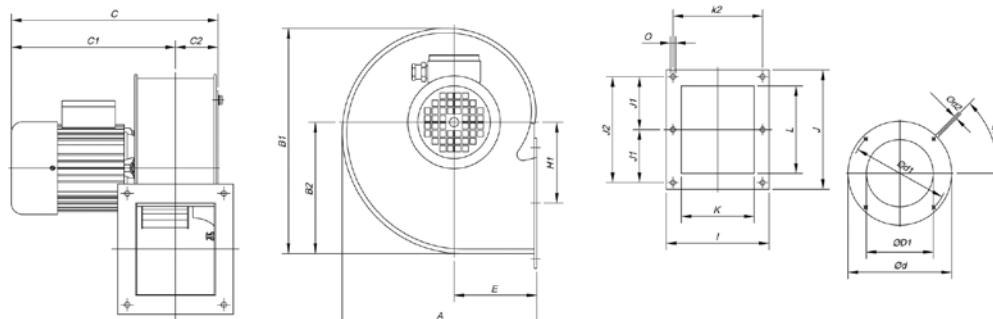

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the impeller diameter, with a minimum of 1.5 m.

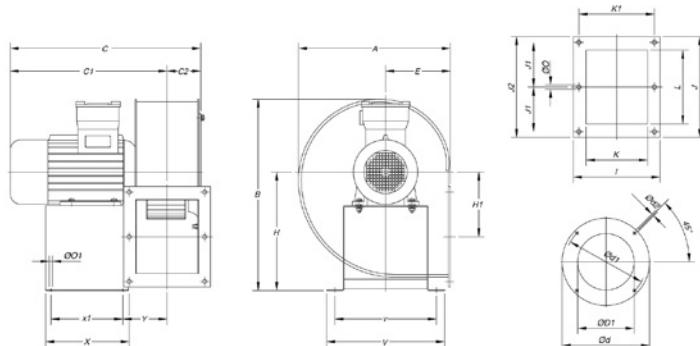

Sound power spectrum Lw(A) in dB(A) frequency band in [Hz]

**Extremely robust centrifugal medium pressure extractor fans fitted with reaction impeller, and with ATEX certification**

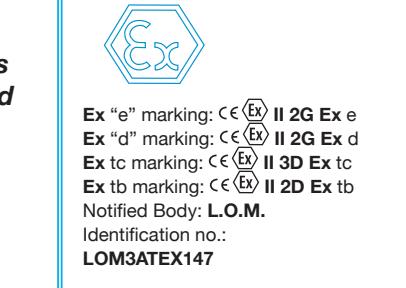

Extremely robust medium pressure, single inlet centrifugal fans for operation in explosive atmospheres.

Fan:

- Sheet steel casing.
- Impeller with reaction blades in extremely robust sheet steel.
- Non-sparking intake ring made of copper or aluminium.

Motor:

- ATEX-certified, class F, Ex "e" explosion-proof or Ex "d" non-sparking motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C +80 °C.

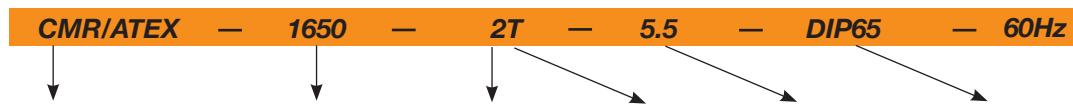

Finish:

- Anti-corrosive finish, with non-ferric ATEX paint of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Motors with built-in PTC.
- Special windings for different voltages and frequencies.
- ATEX construction for different categories.
- Construction entirely of stainless steel.

## Acoustic characteristics

The indicated values are determined by measuring the sound pressure level and sound power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the impeller diameter, with a minimum of 1.5 m.

# HEAT RECOVERY UNITS, AIR FILTER AND TREATMENT UNITS

Due to the international and EU objective of promoting improved energy efficiency in buildings, SODECA presents this new heat recovery units and Filter units catalogue, which is adapted to the strictest European standards, to offer solutions to all needs and achieve the required standard of efficiency in each building.

The teamwork of our engineering department, along with universities and technological centres, and the close cooperation of our customers has made it possible to find new solutions for current market needs, with a view to obtaining major improvements in energy efficiency.

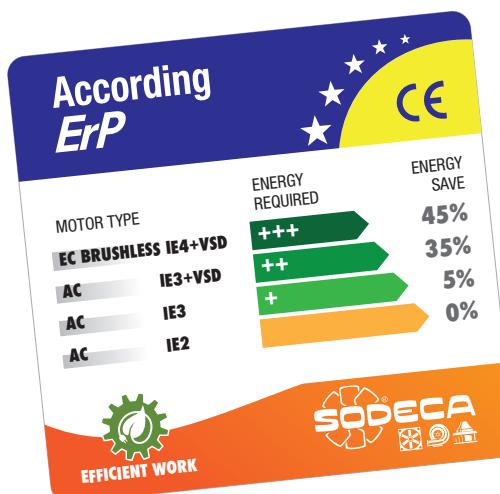

The combination of its experience gained over decades of working with fans and the technology provided by the engineers employed in its different departments has allowed Sodeca to occupy a leading international position as a fan manufacturer.

## OUR OBJECTIVES

- Energy saving and the ensuing reduction in the use of natural resources.
- Energy efficiency improvement.
- Reduction in noise pollution.
- Environmental protection.
- Reduction in CO<sub>2</sub> emissions.

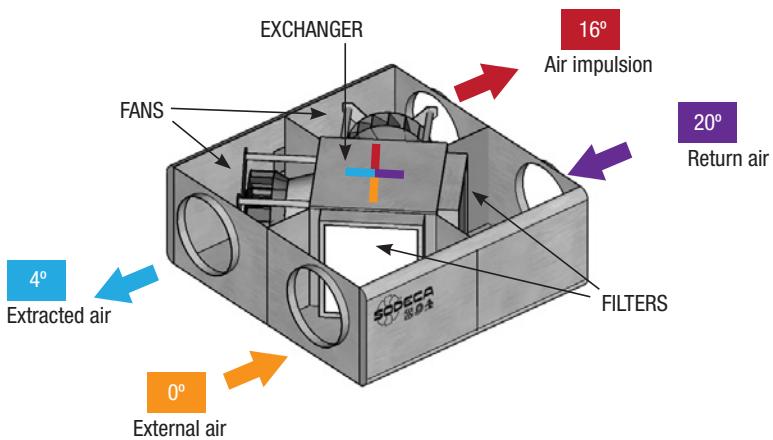

In EU member states, air treatment units must comply with new requirements related to energy efficiency.

## HEAT RECOVERY UNITS

Heat recovery units function by means of a combination of two centrifugal fans, in which one extracts stale air from the interior of the premises and discharges it to the exterior, and the other pumps fresh air from the exterior to the interior of the premises. Both circuits cross each other but without mixing, and the heat from the discharged air is transferred to the fresh air from the exterior, heating it.

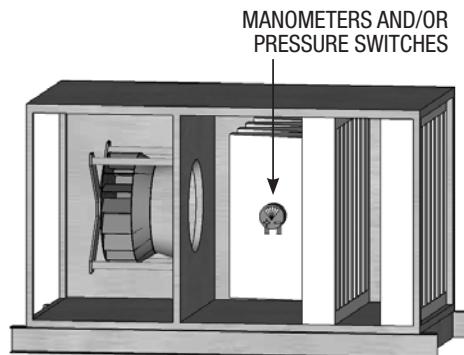

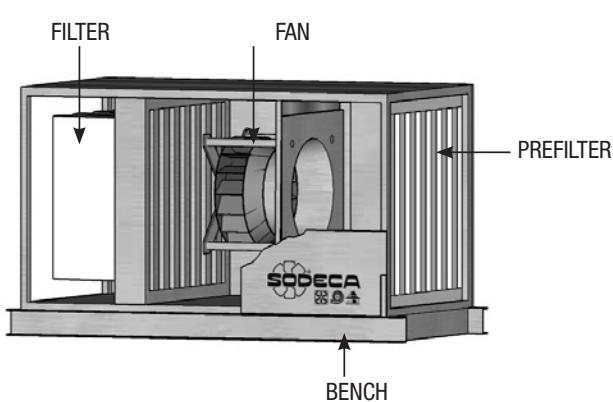

## FILTER UNITS

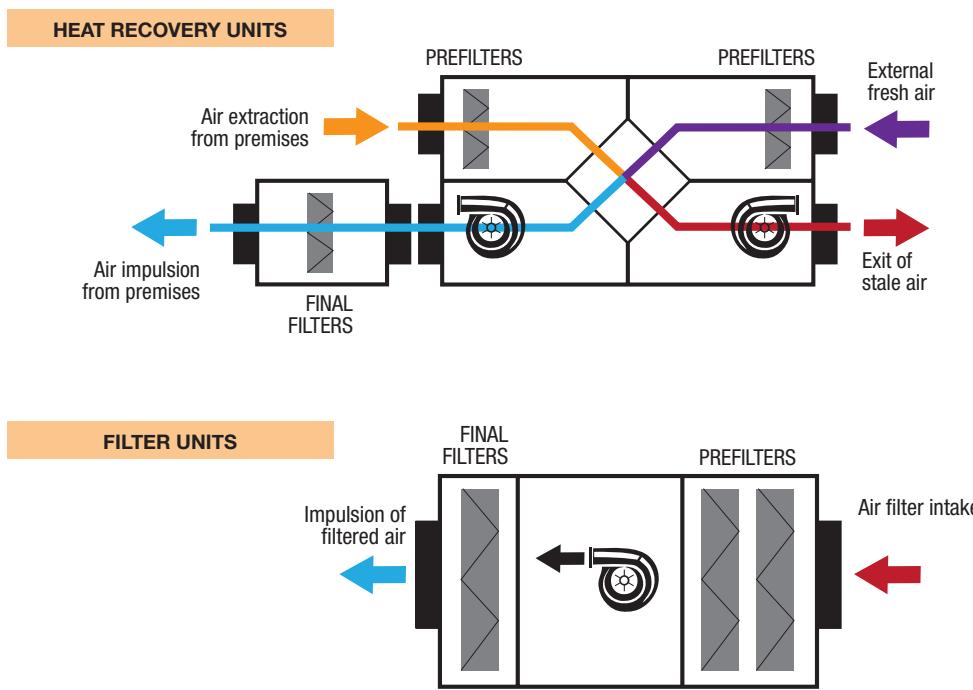

The Filter units remove particles from the air, guaranteeing its quality.

### Filter units components

- Centrifugal fan in a closed box structure.
- Prefiltration and filtration phases.
- Filter status control elements: Manometers and pressure switches.
- Constant flow rate control elements.

## FILTRATION PHASE POSITION

## TYPES OF INSTALLATION

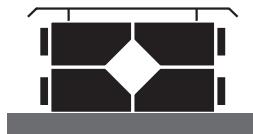

### Wall-mounted

Household equipment for heat recovery in small rooms.

### In technical ceilings

Low-profile equipment with access to components through the side or base.

### On the roof

Equipment for outdoor operation, with lateral access to components. They may require accessories such as roofs, rain shields or other elements.

### In technical room

Compact equipment with lateral access to components. The most common case is equipment with nozzles installed at the top.

## HEAT RECOVERY UNITS

The heat exchanger component in the recovery unit transfers heat from the stale air extraction circuit to the external clean air supply circuit. The greater the exchanger thermal efficiency, the less the need to supply additional air conditioning. Main types of exchangers, depending on their construction:

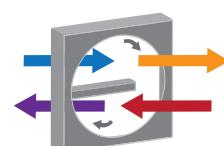

### Cross-flow panels

- . 50-70% thermal efficiency.
- . With no leaks between air circuits.
- . Compact and economical.

### Cross-flow panels

- . 80-95% thermal efficiency.
- . With no leaks between air circuits.
- . Smaller equipment required.

### Rotating

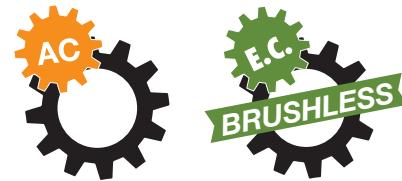

- . 70-85% thermal efficiency.
- . Compact.
- . Can operate in BY-PASS mode.

Heat exchangers may be the heat-sensitive or the enthalpy type. Enthalpy heat exchangers recover heat and moisture, which increases their efficiency, but they require regular cleaning to ensure safe operation.

## MOTORIZATIONS

Types of motor that can be installed in the equipment fans:

- . AC: Conventional high efficiency motors. They may have different speeds or speed drives, depending on the models or accessories.
- . EC: High efficiency motors with proportional control capacities.

## THERMAL BY-PASS

The BY-PASS device diverts the air flow and prevents it from passing through the heat recovery unit and the thermal exchange of the unit.

It has the following benefits:

- . Rapid cooling of air in premises (free cooling). Enables the rapid cooling of the premises when the temperature inside them is too high and the external temperature is more appropriate for the need.
- . Protection from freezing (only in plate heat exchangers). Reduces the risk of freezing in winter.
- . In rotating heat exchanger equipment, the BY-PASS function is achieved by stopping the rotation of the rotor.
- . In plate heat exchanger equipment, the BY-PASS provides an alternate flow passage through the equipment.

## AIR CONDITIONING OPTIONS

Some types of equipment have versions or accessories with coils that heat or cool the air supply. This is very common in heat exchangers, but this may also occur in filter units. The most habitual options are the following:

**Environmental version**  
With no air conditioning supply.

**Electric coil version**  
Heat supplied by electric coils.

**Water coil version**  
Thermal treatment supplied cold or hot water coils.

## AUTOMATIC CONTROL

In heat recovery units, automatic control may offer a wide range of functions, depending on the equipment series or models. The most important are:

- Time programming.
- Number of speeds and variable speed drive (VSD) option.
- Flow rate control based on CO<sub>2</sub> levels or air pressure in duct.
- Connection of equipment to a centralised control system (BMS), Usually by means of a MODBUS RTU protocol.

In the case of filter units, supply of the following elements:

- Manometers and pressure switches that make it possible to know when the filters must be replaced.
- Accessories that regulate the fan, to stabilise the flow rate and increase the life of the filters.

## FILTERS

Filters retain particles that affect air quality and they must be replaced after a certain length of time. The load loss of the filters gradually increases.

Some pieces of equipment have load loss control elements that optimise filter replacement.

- Pressure fittings: Small air fittings that enable the detection of load loss in filtering phases.
- Differential manometer: Visual detection of load loss during the filtering phase.
- Pressure switch: Pressure switch that switches an electric circuit depending on the filter load loss reading.

**F6**

**F6 + F8**

**F7**

**F7 + F9**

**G4 + F6**

Each filtration phase has one or more filters with the same efficiency, depending on the needs of each application. Depending on its configuration, the equipment may have:

- A pre-filter phase to guarantee the correct operation of the equipment. Depending on the system requirements, the efficiencies may be: G4, F6, F7.
- Final filter phases to ensure the quality of the air supplied to the premises, in which the efficiencies are usually: F6, F7, F8, F9, CA (activated carbon gases) or even HEPA, based on the IDA/ODA category.

# RECUP

RECUP-H

RECUP-V

**Configurable heat recovery units with cross-flow panels, for horizontal (H) or vertical (V) installation**

**Characteristics:**

- Plate heat exchanger made of aluminium panels with an efficiency of between 52%-55%.
- Possibility of configuration with different nozzle positions.
- Built-in filters, classes G4, F6 and F6+F8. Other combinations available on request.
- Box made of galvanised steel with built-in acoustic insulation.

- Access door for ease of maintenance and cleaning.

**Versions:**

- Horizontal (H) or vertical (V).
- Environmental: Air renewal without heat supply (S).

**Construction:**

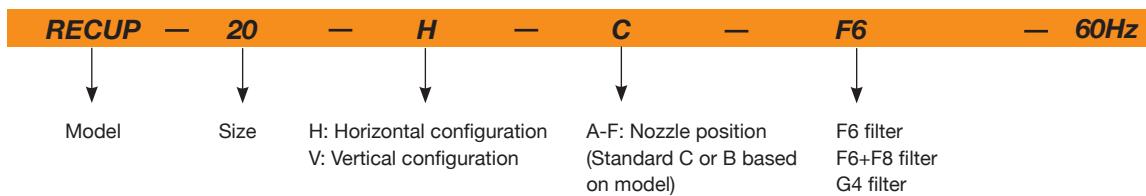

- Galvanised sheet steel structure.
- Entry and exit nozzles with water-tight gaskets.
- Interchangeable nozzles.

**On request:**

- Electric: Heat supplied by electric coils (EB).
- Water coil: Heat supplied by water coils (WB).
- Adiabatic module.

### Acoustic characteristics

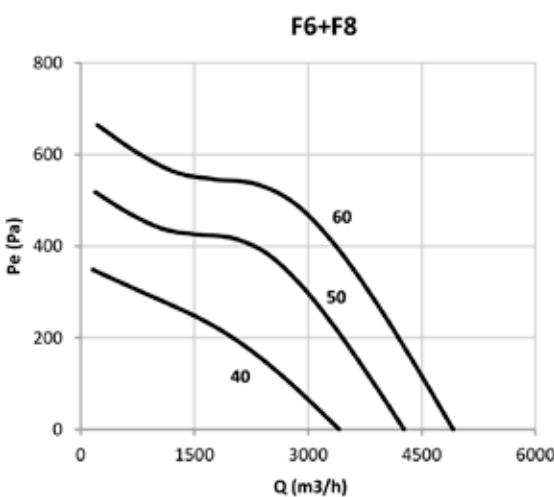

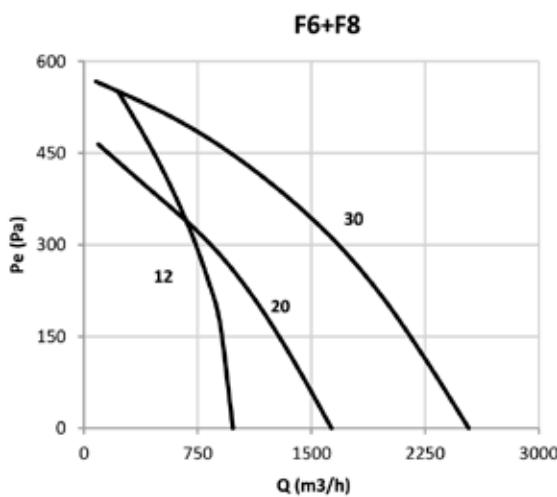

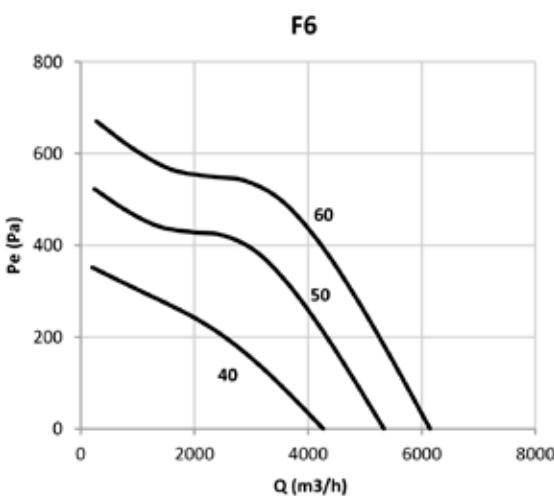

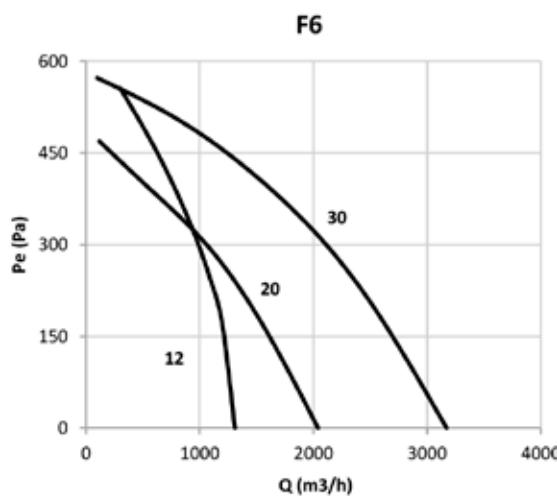

The indicated values are determined by measuring the sound power level in dB(A) obtained in a free field at a distance of no less than 1.5 m from the equipment.

Sound power spectrum Lw(A) in dB(A) per Hz frequency band

# SV/FILTER

**Low-noise, in-line duct extractor fans with different filtering phases**

- G4 + F6
- F6 + F8
- F7 + F9

**Characteristics:**

- Acoustic casing coated with phonoabsorbent material.
- Standardised intake and impulsion flanges allowing for easy installation in ducts.
- G4 + F6, F6 + F8 and F7 + F9 filters, depending on model.
- Inspection and cleaning chambers that are easy to access.

**Construction:**

- Galvanised sheet steel casing.
- Impeller with reaction blades, except models 125 and 150 with multi-blade impeller. Supplied with 4 support feet to facilitate mounting.
- Access door for ease of maintenance and cleaning.

**Motor:**

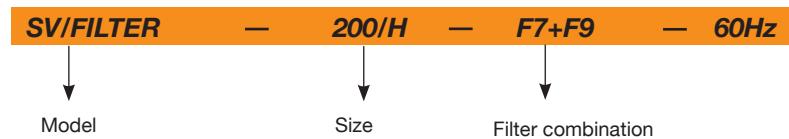

- External rotor motors with built-in thermal protector, class F, with ball bearings, IP54 protection.
- Single-phase 220V 60Hz Adjustable
- Maximum temperature of air to be carried +50 °C.

**Finish:**

- Anti-corrosive finish of polyester resin polymerised at 190 °C, previously degreased with phosphate-free nanotechnological treatment.

**Filter units with sandwich acoustic insulation, fitted with high performance reaction impeller fans and with different filtering phases, depending on model**

**Characteristics:**

- Acoustically insulated structure.
- Direct actuation.
- Air impulsion configurable on 4 sides.
- F6 + F8, F7 + F9 and G4 + F6 filters, depending on selected model.
- Prefilter option, plus two filtering phases.
- Inspection and cleaning chambers that are easy to access.
- Pressure connections for filter control.
- Pressure sensor for filter control.

**Construction:**

- Galvanised sheet steel structure with acoustic insulation.
- High performance impeller with reaction blades made of sheet steel.
- Built-in general support bench.

**Motor:**

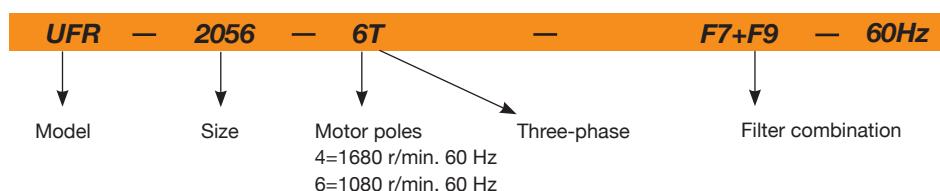

- Class F motors with ball bearings and IP55 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: -20 °C + 60 °C.

**Finish:**

- Anti-corrosive finished galvanised sheet steel.

**Ventilation units with air treatment system and direct drive motors and acoustic insulation, fitted with double inlet fans and with optional filter, electric or water heating modules**

**Box:**

- Aluminium profiles structure with thermal and acoustic insulation.
- Lateral access panel to ensure correct maintenance.
- Modular construction for adding filter or air treatment modules.
- Cable gland for cable entry.

**Versions:**

- MF: Filtration module. Standard F6+F8 version and optional F7+F9.
- ME: Electric coil module. Standard G4 version and optional with F6+F8 or F7+F9 filters.
- MA: Water coil module. Standard G4 version and optional with F6+F8 or F7+F9 filters.

**Fan:**

- Ventilation units fitted with CBD-series fans.
- Impellers with forward-curved blades made of galvanised sheet steel.

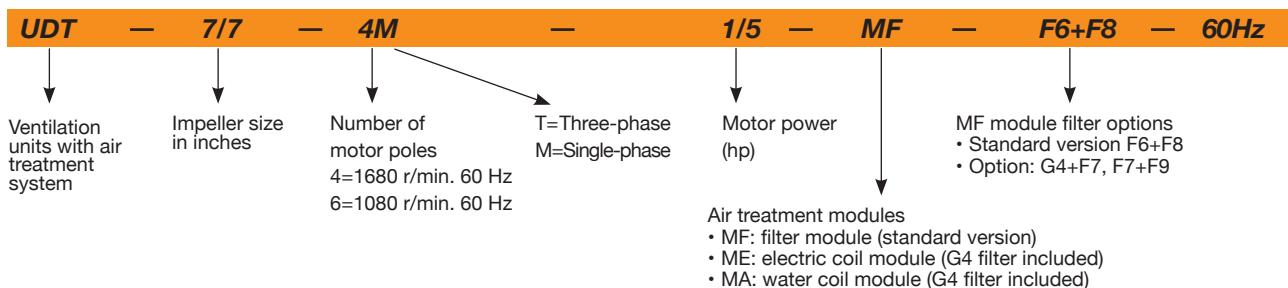

**On request:**

- Vertical impulsion.
- Impulsion-mounted module.

**Motor:**

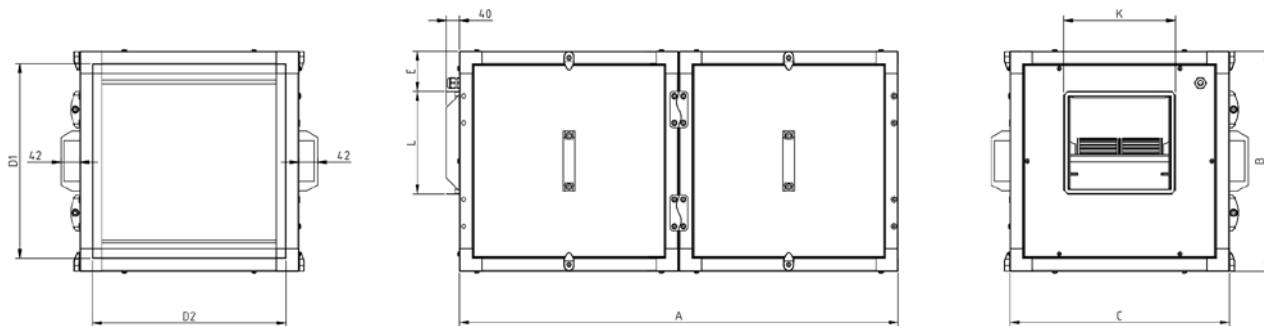

- High efficiency (HE) motors in compliance with ErP 2015.
- Class F motors with ball bearings and IP54 protection.
- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz
- Maximum temperature of air to be carried: -20 °C + 60 °C.

# UDTX

**Ventilation units with belt-driven air treatment systems and acoustic insulation, fitted with double inlet fans and with optional filter, electric or water heating modules**

**Box:**

- Aluminium profiles structure with thermal and acoustic insulation.
- Lateral access panel to ensure correct maintenance.
- Modular construction for adding filter or air treatment modules.
- Cable gland for cable entry.

**Fan:**

- Ventilation units fitted with fans from the CBX, CBXC and CBXR series.
- Impellers with forward-curved blades made of galvanised sheet steel.

**Motor:**

- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP54 protection.

- Multi voltage motor, special design valid for 220/380V 60Hz, 254/440V 60Hz, 265/460V 60Hz, 277/480V 60Hz.
- Maximum temperature of air to be carried: -20 °C + 60 °C.

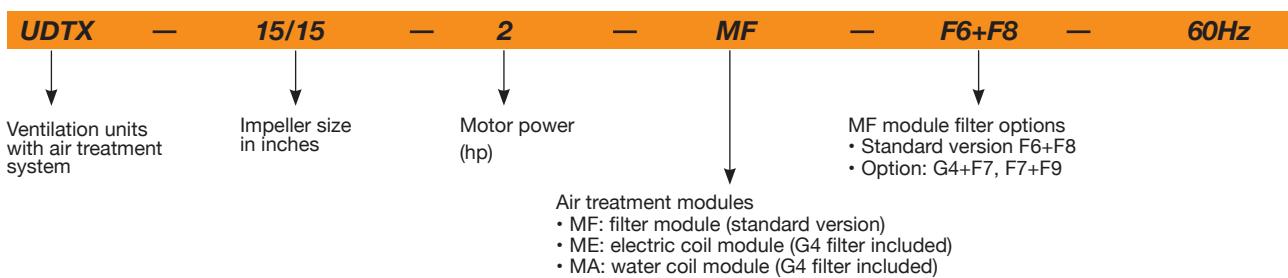

**Versions:**

- MF: Filtration module. Standard F6+F8 version and optional F7+F9.
- ME: Electric coil module. Standard G4 version and optional with F6+F8 or F7+F9 filters.
- MA: Water coil module. Standard G4 version and optional with F6+F8 or F7+F9 filters.

**On request:**

- Vertical impulsion.
- Left side transmission.
- Impulsion-mounted module.

## Air treatment module options

**F**

### MF: Filtration modules

- Aluminium profiles structure with thermal and acoustic insulation.
- Lateral access panel to ensure correct maintenance.
- Modular construction for adding filter or air treatment modules.
- Standard F6+F8 version and optional F7+F9 version module.
- Compatible with the UDT, UDTX, CJBD/ALG, CJBD/ALS, CJBX/ALG and CJBX/ALS series.

### ME: Electric coil modules

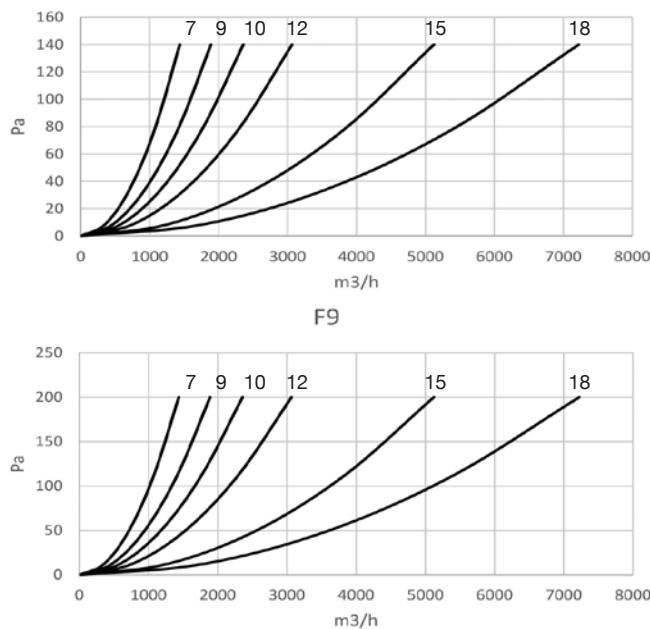

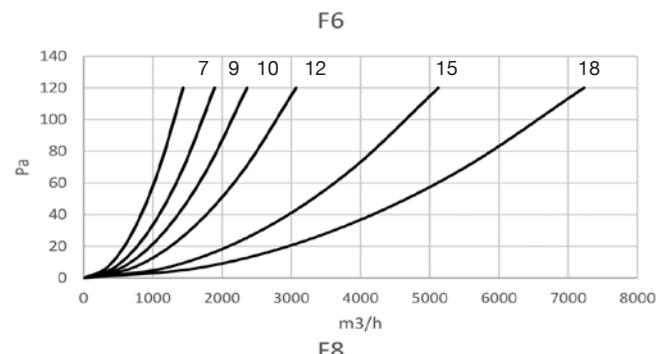

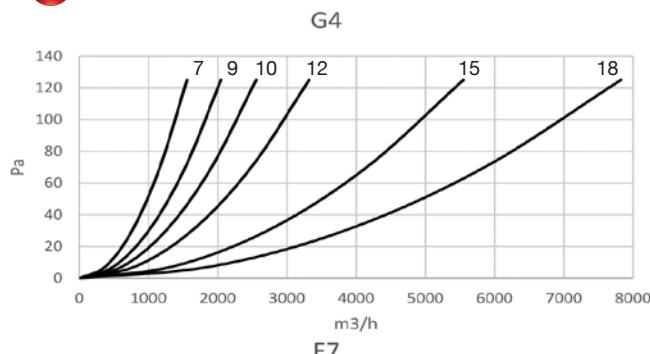

- Aluminium profiles structure with thermal and acoustic insulation.
- Lateral access panel to ensure correct maintenance.
- Modular construction for adding filter or air treatment modules.
- Cable gland for cable entry.
- Standard G4 version module and optional with F6+F8 or F7+F9 filters.
- Compatible with the UDT, UDTX, CJBD/ALG, CJBD/ALS, CJBX/ALG and CJBX/ALS series.

### MA: Water coil modules

- Aluminium profiles structure with thermal and acoustic insulation.
- Lateral access panel to ensure correct maintenance.
- Modular construction for adding filter or air treatment modules.
- Standard G4 version module and optional with F6+F8 or F7+F9 filters.
- Compatible with the UDT, UDTX, CJBD/ALG, CJBD/ALS, CJBX/ALG and CJBX/ALS series.

# INDUSTRIAL AND COMMERCIAL AIR CURTAINS

## EFFICIENCY WITHOUT RESERVATIONS

Air curtains achieve savings in consumption of up to 30% in indoor air conditioning systems, preventing draughts and temperature gradients that also affect comfort and well-being.

## NEW DESIGN

Curtains with a perfect blend of innovation and design.

## MULTIPLE APPLICATIONS

Large range of curtains appropriate for multiple applications, door dimensions and mounting options.

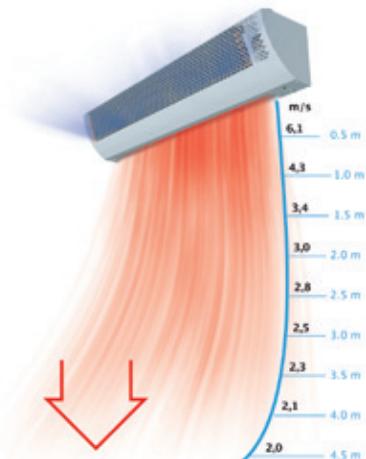

## VARIED CONTROL OPTIONS

Most air curtains have different control options, to respond to different needs.

## EFFICIENT DESIGNS

Efficient designs that achieve adjustable laminar flows with a large range and efficiency and minimal power consumptions.

## AIR CURTAIN TYPES

The air curtains may be used for simply recirculating the interior air or they can be used for heating buildings:

### ENVIRONMENTAL

Recirculation of ambient air with fans, without supplying heat.

### ELECTRIC

Recirculation of ambient air and when necessary, heating the air with electric elements during the winter.

### HOT WATER

Recirculation of ambient air and when necessary, heating the air with hot water coils during the winter.

Curtains with electric or water coil heating can be used as heating elements, as their performance and hot air volumes are able to heat up a surface area of 500 to 750 m<sup>2</sup>, depending on the model, in the door area.

## SELECTION AND INSTALLATION OF AIR CURTAINS

**1**

Define the air curtain series you are interested in, the door height and the preferred design.

**2**

Select the most appropriate model, depending on the door length. The curtain must cover the door opening and an extra 100mm on each side.

**3**

Select the type of curtain you want: environmental, electric or hot water type.

**4**

Select the air curtain that best suits your needs to obtain the adequate noise level.

**5**

Install the curtain as close as possible to the entrance, on the inside wall of the premises.

**6**

In the case of separated premises that are very cool, install the air curtain on the wall with the most heat.

For optimal operation, it is advisable to install and control the air curtain using controllers specifically designed for this application.

# ECONOMIC

**Economical air curtains for small commercial establishments**

Economical air curtains for heights of up to 3m. for horizontal installation, specially designed for small commercial establishments.

Construction:

- Painted metal structure
- Designed for horizontal mounting
- Version S: Two-speed fan operation
- Operation led indicator lamp
- Supports for attachment to wall
- Version E: Electric coil control with safety elements. Delayed fan stop to evacuate residual heat

Version:

- |  |                                      |
|--|--------------------------------------|
|  | Environmental: Recirculation of air  |
|  | Electric: Built-in electric elements |

External control

- Version E: Remote control operation

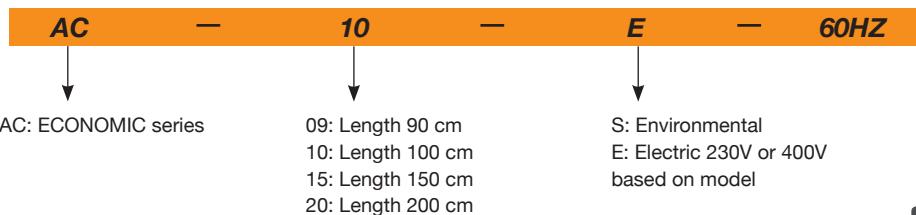

Control

Applications:	Small commercial premises	Bars
	Stores	Offices

Control:		
Operation	manual	manual
Speeds	2 speeds	1 speed
Electric coil control	no	1 power level
Door contact	no	no
Operation indicator lamp	yes	yes

## Order code
